Welcoming Address >

Welcoming address by the President of the Austrian Academy of Sciences

As President of the Austrian Academy of Sciences (OeAW) and Professor Emeritus of Geography, it is my great pleasure to welcome you to the EU-GEO Congress at the OeAW and in Vienna!

For me, geography has always been a very attractive subject. For one, because it provides a broad basic education that includes both natural and social science disciplines. For another, because geography deals with social and environmental policy issues that are extremely important for contemporary society. Personally, I have focused on the topics of urban development, demography, and migration research, and have – or so I aim – been able to provide society and politics with relevant orientation knowledge. This was and is extremely important, especially in such ideologically charged areas as urban development and migration research.

The motto of the congress “Geographies of a Changing Europe” addresses this orientation knowledge in a changing era. Geography is not a monolithic discipline with fixed questions, methods, and content, but rather a dynamic subject that is constantly changing. Therefore, there is no such thing as “the” geography, but rather many geographies, reflecting thematic diversity and a changing world. The only constant here is spatial differentiation and the connection between space and society. Those who ignore this leave geography behind and be-

come part of the neighbouring disciplines of natural and social sciences.

Geography is in good hands at the OeAW. Two institutes have geography as their disciplinary core, namely the Institute for Urban and Regional Research (ISR) and the Institute for Interdisciplinary Mountain Research (IGF). Compared to other OeAW institutes, both institutes are rather small but thoroughly successful. At the centre of the ISR’s research lies the city, in particular the analysis of the structural and social upgrading and downgrading of neighbourhoods, ethnic and social segregation, the changing significance of public space, and the mechanisms of the urban housing market. The IGF focuses on the development of mountain regions in general and the Alps in particular. This involves investigating the effects of climate change on glaciers and gravitational mass movements in the Alpine region, as well as changes in vegetation according to altitude from a global perspective.

Several other institutes are not primarily associated with geography, but make important contributions to regional studies, including in the context of area studies. The Institute of Iranian Studies (IFI) analyses historical, cultural, and political structures in Iran, Afghanistan, and Tajikistan, as well as in societies in the Caucasus, Central Asia, and South Asia that have historical ties to Iran. The Institute for Social Anthropology (ISA) focuses on the programmatic contemporary issues of consensus and conflict in Asia and the eastern Mediterranean, while the Institute for the Cultural and Intellectual History of Asia (IKGA) fo-

Welcoming Address

cuses on the historical, religious, and cultural structures of East, Southeast, South, and Central Asia.

The EUGEO Congress will take place in the buildings of the OeAW, specifically in the Academy's main building, in the heart of the city. This is a visible sign that science in Austria has arrived and is firmly anchored in the centre of society. And for us, as an elite research institution, this is an important concern: to go out, leave the ivory tower, explain to people what we do, and support politicians in their complex decisions with clear analyses. Anchoring science in society will in the future be supported by the Science Communication Center, a joint project of the OeAW, the University of Vienna, and the Technical University of Vienna, which is supported by two ministries and located in the immediate vicinity of the Academy. A centre for science is being created where science is discussed and communicated. When the EUGEO Congress returns to Vienna in the future, this centre will have been renovated and opened, expanding the possibilities of the congress.

But we're not quite there yet, the EUGEO Congress is taking place now, in 2025. Everything is prepared, the papers have been written, and the congress is ready to begin. I wish all participants inspiring days in Vienna, exciting discussions, and enriching encounters that will strengthen your work and your networks in the long term! Enjoy the city and feel at home at the Academy.

Heinz Faßmann

Welcoming address by the Director of the Institute for Urban and Regional Research

Dear colleagues,

It is a pleasure to welcome you to the 10th EUGEO Congress in Vienna! The EUGEO conferences are established as a thematic open conference format, providing a forum that allows the exchange within the field of geography and spatial oriented research. Following this tradition, we decided to organize this congress under the theme “Geographies of a Changing Europe”. Therewith, we intend to explore the dynamic transformations shaping our continent, its landscapes, and societies; secondly, we engage with conceptual and methodological trends, as well as the perspectives of the discipline itself.

The challenges that shape the continent in our time are considerable and manifold. They comprise transformations towards a sustainable society, demographic changes, and an increasing diversity in many European cities, as well as geopolitical and macroeconomic tensions within Europe and on the global scale. If you look through this conference program, it is apparent that many sessions and presentations address these and further challenges of European societies. In my understanding, this orientation on the challenges of our present-day society is one of the strengths. Therein, we might see a positive change in our discipline: Some decades ago, scholars spent a lot of time and energy discussing the question of what

geography is and how it can be distinguished from other disciplines. This debate shifted to the background, as nowadays, problem- and society-oriented research has come to the fore.

After almost two years of preparation, I am also very proud to look through our program: In four days, we will host more than 500 scholars from 30 European countries and from 11 countries outside Europe. In the four days of our conference, the program comprises 90 sessions, 300 presentations, as well as 9 city walks and two highly anticipated keynote speeches.

Organizing a conference with more than 500 participants is not a daily routine, in particular for a small institute like the ISR. An efficient planning process of the conference, as well as the engagement of many colleagues, made this congress work: the organizing committee – Alois Humer, Ursula Reeger, Wiebke Sievers and Barbara Biziak –, which comprises a considerable share of our institute's staff, as well as our conference manager Ioannis Brigkos, facilitated this project. Beyond our institute, the Austrian Academy of Sciences supported this conference from the beginning and provided the necessary infrastructure. Many thanks also go to all colleagues at the ISR and the Event Management team of the Austrian Academy of Sciences for their constant support and commitment throughout the entire process. This is a challenge, as the Academy does not hold the infrastructure of a university, where EUGEO conferences usually are hosted.

At last, the EUGEO utilizes the whole ÖAW Main Building and the Campus

Welcoming Address

for the four days of the conference. Both buildings have been renovated two years ago. It makes me cheerful to see that the inner courtyard of the campus, which was a grey field for many years, has now become a lively space for scientific exchange and debates, and a place where new, creative ideas emerge. We are delighted that the EUGEO will be hosted in this historic, meaningful, yet open and creative space, right in the center of Vienna's historic city.

We hope that this program meets your interests and, even more importantly, also provides unexpected new perspectives that bring inspiration to your scientific work. Furthermore, this program serves not only as an orientation guide for the conference days, but also as a documentation of recent research fields, debates, and applied methodologies in geographical research. And we also hope that this program is not only a further weight in your luggage, but also a memory of inspiring days in Vienna.

Robert Musil

**Welcoming address by the
President of the Association of
European Geographical Societies
(EUGEO)**

Dear EUGEO 2025 delegates,

On behalf of the Executive Committee of the Association of Geographical Societies in Europe, and of all the Geographical Societies that are members of EUGEO, we extend a warm welcome to all of you at the EUGEO 2025 Congress in Vienna. We are confident that your participation in this event will be both beneficial and enjoyable. Since the inaugural EUGEO Congress held in Amsterdam in 2007, the biennial EUGEO congresses have established a strong reputation as major events in the field of geography within Europe and beyond. Traditionally, EUGEO congresses are designed to be accessible and welcoming, especially to young and early-career geographers. This tenth edition of the EUGEO congress promises to be memorable, following the success of its predecessors over the past eighteen years (Amsterdam, Bratislava, London, Rome, Budapest, Brussels, Galway, Prague, Barcelona). Vienna, known for its charm and cultural significance, serves as an excellent location for this important meeting. EUGEO 2025 convenes during a time of rapid change, where environmental and societal challenges are emerging both within Europe and globally. The theme of this congress, "Geographies of a Changing Europe," directly addresses these dynamic transformations, shaping our conti-

nent, its landscapes, and its societies. This theme provides a platform for a wide array of theoretical, methodological, and empirical perspectives in contemporary geography. Geography and geographers can play an important role in building change! The extensive number of sessions dedicated to this theme, along with the many participants presenting their findings on the changing geographies of Europe, suggests that we can anticipate a successful congress in Vienna, hosted by the Austrian Geographical Society and the Austrian Academy of Sciences. We would like to express our gratitude to the local organizers, representatives of the Austrian Geographical Society, who have been working hard to make the 10th EUGEO Congress possible and we wish you all a pleasant congress in this beautiful city!

Zoltán Kovács, EUGEO President
Massimiliano Tabusi, EUGEO Secretary
General

Welcoming address by the President of the Austrian Geographical Society (ÖGG)

The Austrian Geographical Society ("Österreichische Geographische Gesellschaft", ÖGG) warmly welcomes you to the EUGEO Congress in Vienna. Founded in 1856, the society will celebrate its 170th anniversary next autumn, making it one of the oldest geographical societies in the world. With its headquarters in Vienna, branches in Graz and Klagenfurt am Wörthersee, a branch association in Innsbruck and a member association in Salzburg, it represents all of Austria in the field of geographical societies.

As co-organisers of the congress managed by the Institute for Urban and Regional Research (ISR) of the Austrian Academy of Sciences, we are delighted to be able to host the 10th Congress of the "Association of European Geographical Societies" (EUGEO) in Vienna. The EUGEO congresses take place every two years, and we are honoured that at the last congress in Barcelona two years ago EUGEO accepted the invitation of the Austrian Geographical Society to hold the next congress in Vienna.

Founded in 1994 on the initiative of the Italian Geographical Society, EUGEO now has 37 geographical societies from 27 European countries as members and has become an important networking platform and a significant mouthpiece for European geographical societies. This is also reflected in the steadily increasing number of participants at EUGEO congresses. In this sense, we are delighted that the EUGEO Congress in Vienna is fully

booked. More than 500 speakers will address current research issues in our field in over 80 specialist sessions and keynote lectures, presenting geography in its full range as a scientific discipline with high societal relevance in physical geography and human geography, applied geography and spatial research, geographic information science and subject didactics.

We would like to express our special thanks to the Institute for Urban and Regional Research, which has been responsible for organising the congress, and to the Austrian Academy of Sciences, which provides its beautiful premises for the congress. In this context, we would particularly like to thank the Director of the Institute for Urban and Regional Research at the Austrian Academy of Sciences, who is also Secretary General of the Austrian Geographical Society, Robert Musil, and the excellent congress manager, Ioannis Brigkos, for their outstanding organisation and hard work in designing, planning and implementing the congress, as well as to all those from the Institute for Urban and Regional Research and the Austrian Geographical Society who are involved in organising and supporting the congress or looking after the participants for their great commitment and wonderful co-operation.

The Austrian Geographical Society wishes all participants a stimulating and interesting stay in Vienna and an exciting and professionally inspiring EUGEO Congress.

Helmut Wohlschlägl

Panthéon-Sorbonne

***Co-evolution and sustainability of
European cities***

Over time (decades and even centuries) is observed a rather strong persistency of structural properties (relative size and spacing, functional diversity and complementarity) of the European system of cities. We can explain this long sustainability of European cities through two major aspects of their dynamics that are emphasized in the evolutionary theory of urban systems. The first is the generic adaptive process that is linked to the spatial and hierarchical diffusion of innovations. This is revealed by century's long urban growth patterns and fluctuations that have similarities with the stochastic Gibrat's model, and by the recent evolution in scaling laws of

economic attributes corresponding to the globalization of urban activities. The second process is an historical path dependence that is linked with the configuration of interaction networks between cities and their regional environments. Differentiated models of territorial governance, border effects and geopolitical contexts including temporal barriers and cohesion policies are possible explanatory factors of these historical traces in the urban evolution. These dynamic trends may be considered by stakeholders in local and regional policies for ensuring the viability of such an urban geodiversity in the future.

Prof. Judith Miggelbrink

Professor of Regional Geography
University of Leipzig
Director of the Leibniz Institute for
Regional Geography

***Geographies in/of the
Anthropocene. Preliminary
thoughts from a human geography
perspective***

What might human geography look like if we truly take the planetary seriously – not just as backdrop or scale, but as a fundamental shift in how we understand space, knowledge, and responsibility? In this keynote, I explore how the “planetary turn” challenges us to rethink not only our geographies, but also the ways in which we produce and legitimize knowledge itself. Drawing on the visual and conceptual power of planetary imaginaries – from the iconic “blue marble” to the debris-strewn landscapes of the Anthropocene – I trace how planetary thinking destabilizes inherited binaries such as global/local, nature/culture, and subject/object. This opens the door to a reimagined human

human geography: one that is attuned to entangled temporalities, responsive to deep relationalities, and committed to pluriversal, situated knowledge practices and “tentacular thinking” (Haraway). While the planetary turn itself is far from uncontested – raising critical questions about universality, positionality, scale, and power – it nonetheless offers a provocative lens for rethinking the role of geography today. In light of escalating ecological and epistemic crises, this is less a call for ready-made answers than an invitation to critically reflect on our modes of knowledge and to explore new, perhaps still uncertain, ways of engaging with a shared and fragile planet.

Changing tourism in a changing Europe

Session-Chairs:

Angela Hof, Alejandro Armas Diaz,
Martin Knoll, Nora Müller

Tourism is a hybrid phenomenon that blends and transcends spaces, places and all their environmental, social and economic sectors. Sustainable tourism has gained prominence amid global crises and awareness of tourism impacts has been growing. Still, it is often seen as a development pathway, while its contribution to the global carbon footprint and rebound after the COVID pandemic challenge the (un)sustainability of tourism. This session addresses tourism transitions, changing mobility patterns, tourism infrastructures and path dependencies. It seeks to critically engage with tourism and its potential as a transformative vector for socio-ecological change in society and the economy.

Presentations:

Kučaj and Beljanica Mt. as a potential national park – a trigger of revitalization of rural areas in eastern Serbia?

Session 114/I Mon Sept 08
Room JOS 2:00pm - 3:30pm

Towards more resilient food systems: exploring spaces between the mainstream and alternatives

Session-Chairs:

Petr Daněk, Lucie Sovová, Christina Plank, Marta Kolářová, Jan Vávra,
Petr Jehlička

The research on alternative food networks and other alternatives, while mushrooming in recent decades, developed in isolation from research on the conventional food system. In contrast to this epistemic separation, many households routinely combine food from diverse sources. This session explores the links between the food systems and

spaces in which they interact, while stressing the practicalities of household's everyday practices. Welcomed are contributions about food self-provisioning, alternative food networks and other alternatives which take into account the place of the dominant food system in shaping practices, motivations and values attached to produced, shared or consumed food.

Presentations:

Community-supported agriculture through the lens of values-based modes of production and consumption

2:00pm - 3:30pm

New phenomenon of tourism mobility in a changing Europe

Session-Chairs:

Gábor Michalkó, Anna Irimiás

The 21st century has transformed tourism through digitalisation, social media, low-cost flights, and experiential consumption. This evolution was disrupted by crises like COVID-19, war, inflation, and climate change, creating ongoing instability in European tourism. Destinations face capacity overload and local backlash, while governments struggle to control unsustainable tourism growth. As a result, degrowth ideas and calls for individual responsibility gain traction. This session invites presentations on the drivers and impacts of tourism change in Europe, aiming to enrich tourism mobility theory and support typologies and managerial practices through spatial and temporal perspectives. The session will be organised collaborating with IGU GLOBILITY Study Group.

Presentations:

The measure of overtourism in European destinations

Migration, migrant transnationalism and well-being. Drivers, impacts and spatial factors

Session-Chair:

Ádám Németh

This session seeks to unpack the multi-faceted relationship between migration, migrant transnationalism, and subjective well-being (SWB: life satisfaction, happiness, and other affective or eudaimonic variables) through the discussion of the following topics. 1) Well-being inequalities in societies (e.g. between native- and foreign-born people) and its changes over time and space. 2) The impact of SWB on migration intentions/decisions and impact of migration on SWB changes. 3) The way transnational economic, political and sociocultural ties affect spatial behaviour and SWB. 4) The way certain factors influence SWB in cities, such as housing affordability, access to public services, or perceived social cohesion.

Presentations:

Different sources, different conclusions? Survey-based insights on the subjective well-being of migrants in Vienna and Budapest

Ádám Németh^{1,2}, Yuri Kazepov¹

Spatio-temporal infrastructures and policies for a just post-growth transformation

Session-Chairs:

Karl Kraehmer, Sarah Ware

Policies for urban greening are often contested as socially unjust and ecologically ineffective, leading to green gentrification or 'islands of sustainability'. Political backlash is increasing as mainstream green policies place efficiency over sufficiency. Efficiency, inherent in capitalist, growth-oriented economies, considers ecological crisis as a technical problem, while sufficiency, central to (eco-)feminist, de- and post-growth perspectives, focuses on a just distribution of resources within ecological limits. We ask: how can the right to the city become a right to the socio-ecological city? Which spatio-temporal infrastructures and policies are needed, at different scales, for a just and desirable socio-ecological transformation beyond growth?

Presentations:

"I walk, I see, I do". On the transformative potential of hidden informal greening practices in the Czech Republic and Estonia

Anja Decker¹, Bianka Plüschke-Altöf²

¹Institute of Sociology of the Czech Academy of Sciences, Czech Republic; ²School of Natural Sciences and Health, Tallinn University, Estonia

2:00pm - 3:30pm

The foundations of national identities in Europe: battlefields, war memorials and nation-building. The adaptation of war memory to changing political regimes

Session-Chairs:

Péter Reményi, Norbert Pap

The wars on the eastern and southern peripheries of Europe have had a fundamental impact on local, national and European identity. There are several well-known battles that have a nation-building effect such as the Battle of Kosovo Polje, Mohács, Udbina, Grunwald, or the sieges of Vienna, Constantinople etc. From the 19th century, these sites have become an important feature of the commemorative landscape through often competing memorializations of different actors. We are waiting for papers on battle(field)s with identity-shaping effect on a local, national or European scale from a theoretical approach as well as case studies of individual battles.

Presentations:

The Battle of Mohács, 1526 – a memorial landscape

Norbert Pap, Máté Kitanics, Péter Gyeizse

University of Pécs, Hungary

The Battle of Varna, 1444

Nurcan Özgür Baklacioglu¹, Sinem Arslan², Norbert Pap³

2:00pm - 3:30pm

New mining futures in left-behind places

Session-Chairs:

Helene Roth, Nina Gribat

Against the backdrop of the European Critical Raw Materials Act and the New Green Deal, Europe is witnessing a proliferation of new mining projects, many of which are highly speculative. Many of these projects appear to be located in historical mining areas that have undergone structural change and peripheralisation, and which have often seen a rise in populism. This session will examine the tensions and contradictions between environmental objectives and the continuation of extractive politics, and their impact on left-behind places. The session will bring together contributions based on theoretical insights and case studies to reflect the diversity of new mining futures in a changing Europe.

Presentations:

EU-Greenland partnership on mining industry: contradictory spatial, political and social effects of the industrial engineering of promises

2:00pm - 3:30pm

Mass housing, high-rise and vertical cities – topical as always

Session-Chair:

Tamás Egedy

In Europe, housing estates became widespread, and in many countries, they constitute an important segment of the housing market. In recent decades, the issue of high-rise housing estates has often been the focus of urban geographical, architectural, and urban planning discourses, and more recently, a new mainstream urban paradigm, the theory and practice of vertical cities have grown out of this issue. This session aims to bring together and present current research on mass housing, high-rise housing estates, and vertical cities,

Sessions, Monday

including social, economic, and urban-istic issues, housing market processes, and anything else.

Geography and the science-society interface

Session-Chairs:

Michiel van Meeteren,
Sophie Bijleveld, Lena Simone Marina
Paauwe, Noor Vet

Historically, modern geography emerged at the border of the science-society interface where "relevance" of the discipline was of utmost importance. Many would argue that the discipline tends to thrive and have impact whenever this interface is successfully traversed. Consequently, geography has had long-standing debates on the role, benefits and hazards of "applied research" as a foundation of the discipline, and on geography and public policy. This session will highlight and compare instances of traversing the science-society interface in geographical research, both contemporaneously and historically. We wish to achieve a comparative understanding of this relationship, its benefits and hazards.

Presentations:

Cross-border simillarities and differences in flood protection infrastructure along Prut river and the influences for vulnerability and risk

Which literary geographies for a changing Europe?

Session-Chairs:

Giacomo Zanolin, Lucrezia Lopez

This session results from a dialogue between the “Geografia e letteratura” Group (AGel) and the “Pensamiento Geográfico” Group (AGE). Participation in EUGEO is an occasion to strengthen international collaboration on literary geography. Thus, the session welcomes diverse research methods and approaches in this field, exploring European cultural geographies. Literary geography has gained international attention (Brosseau 1995; Hones 2022; etc.), distinguishing between analysing texts (literary geography) and studying literature’s relation to territorial contexts (geography of literature). Literary texts actively construct social meanings of space. The session encourages theoretical and applied contributions, especially those offering methodological insights into geo-literary research across Europe.

Human dimensions of mediterranean marine biodiversity. A geographical approach

Session-Chairs:

Stefano Malatesta, Marcella Schmidt
di Friedberg, Enrico Squarcina, Maria
Paradiso, Clara Di Fazio, Arturo Gallia

Sustainable management of Mediterranean Marine Biodiversity is a key EU priority, with numerous programs promoting the integration of marine protection and human activities. However, this vision is limited by two critical gaps: a lack of understanding of public conceptions about the sea, and the oversimplification of key cultural, social, and political drivers. This session aims to address these gaps from a geographical perspective, enriching the debate on the "human dimensions" of biodiversity. We define "human dimensions" as a set of behaviours, values, policies, practices, perceptions, conceptions related to the Mediterranean as a marine region.

Tuesday

Session 105/I Tue Sept 09
Room SIS 9:00am - 10:30am

Place names between cultural heritage and cultural change

Session-Chair:

Peter Jordan

After the UNESCO Convention for the Safeguarding of the Intangible Cultural Heritage of 2003 including all expressions of language and thus implicitly also place names, it is the leading paradigm to preserve place names as cultural heritage and to avoid any changes. This has certainly its strong justification if one considers the significant symbolic value of place names for space-related identities or their function as keys to cultural history. In an open scientific discussion, however, also counterarguments may be highlighted, e.g., why also new generations shouldn't have the opportunity to shape the namescape according to their perception of the environment.

Presentations:

Mounds and their names in the Hortobágy region

Katalin Reszegi

University of Debrecen, Hungary

Interpreting a landscape through ancient, local micro-toponyms: The hinterland of the river Ogwen in Eryri, north Wales, from source to sea. Economic change and challenges

Rhian Parry

Bangor University, North Wales, United Kingdom

Rethinking the city: Toponymy at the intersection of local identities and migratory dynamics

Souad Bouhadjar

Université Dr.Mouley Tahar Saida, Algeria

Cartographies of memory: street toponymy as a reflection of political regimes. Application to the case study of Elda (Spain)

Gabriel Moreno-Delgado

University of Alicante, Spain

Session 124/I Tue Sept 09
Room JOS 9:00am - 10:30am

Urban public spaces under pressure? Insights into contemporary challenges and potential solutions

Session-Chairs:

Ursula Reeger, Miriam Haselbacher

Public spaces in urban areas play a central role in social life. They are not only places for encounter and exchange, but also a mirror of the social, cultural and economic dynamics of a city. Currently, public spaces in European cities are facing manifold challenges that have put them under pressure, including the effects of global crises (pandemic, climate crisis), issues of security and securitization, urban growth and the unequal distribution of easily accessible public spaces which primarily affects economically weaker groups. We will delve into these topics and also welcome contributions on discourses on

urban public space, its governance and the role of civic participation.

Presentations:

Navigating inequalities: Youth, public spaces, and digital mediation across diverse geopolitical contexts

Sabine Knierbein¹, Rachel Almeida², Richard Pfeifer¹

¹TU Wien, Austria; ²Pontificia Universidade Católica de Minas Gerais, Brasil

Extremist discourse in hybrid public space: Insights from a multi-sited ethnographic study of the 2024 European parliament elections

Jullietta Stoencheva, Tina Askanius
Malmö university, Sweden

The politicization of urban public space: The case of Vienna

Ursula Reeger, Miriam Haselbacher, Josefa Stiegler

Austrian Academy of Sciences

Urban fragments in southern Europe, between security pressures and subversive rhythms in night-time public spaces

Eléonore Jactat

University of Palermo, Italy

Urban planning approaches such as the 15-minute City promise to further the sustainable mobility transition at the local level. Based on the diversity of understandings and realities of accessibility, different approaches, definitions and methods have recently been introduced to the scientific debate. This session focusses on the diversity of substantial and methodological approaches related to the 15-minute City and neighbouring concepts. The aim is to discuss and critically reflect the variety of scientific and empirical approaches to study the diverse conceptualizations, realisations and lived experiences of the 15-minute City and related ideas.

Presentations:

Exploring the 15-minute city: Trends, challenges, and insights from a bibliometric perspective

Özge Yalçiner Ercoşkun, Ebru Öcalır, Ceren Ercoşkun, Hilal Tulan Işıldar

Gazi University, Türkiye

Reframing accessibility by proximity for fair implementation of the X-min city in peri-urban areas

Paola Pucci, Giovanni Lanza

Politecnico di Milano, Italy

Embracing urban complexity in accessibility planning: Towards a people-centred and place-based approach to reach the objectives of the 15-minute city

Felix Johan Pot¹, Ward Rauws¹, Samira Ramezani¹, Alois Humer², Anna Kajojaari²

¹University of Groningen; ²Austrian Academy of Sciences

Session 125/I

Tue Sept 09

Room SR1

9:00am - 10:30am

The diversity of the 15-minute city: Approaches, definitions, and methods

Session-Chairs:

Martina Schorn, Janina Welsch, Samira Ramezani

Reimagining urban edges: How Haakon VII Street shapes the 15-minute City

Micaela Mancini

GSSI, Italy

Session 131/I Tue Sept 09

Room AZS 9:00am - 10:30am

A Europe of changing geographies: Geographers' early 20th-century epistemic communities between empires and nation-states

Session-Chairs:

Ferenc Gyuris, Johannes Mattes,
Norman Henniges

This session explores how epistemic communities of geographers evolved from the late 19th century to the mid-20th century, navigating political, economic, and institutional upheavals— including the reconfiguration of empires and new nation-states. It examines how geographic knowledge was shaped and reshaped during these transformations, including changes in funding, methods, and institutions. Contributions range from comparative transnational studies to localized cases, and the session encourages perspectives on overlooked actors such as academic collaborators, women, and ethnic minorities. It aims to historicize how geographers responded to and influenced societal shifts across Europe's transforming political landscapes.

Presentations:

The academic development of geography in the complex state contexts of the Austro-Hungarian

Monarchy: Institutions, key scholars, and research agendas

Bálint Hilbert

HUN-REN Centre for Social Sciences, Hungary

“Ist die Menschheit nicht ein größeres Österreich“: Erwin Hanslik's expansionist geography

Maciej Górny

Tadeusz Manteuffel Institute of History Polish Academy of Sciences, Poland

Different Visions: Competing ideas on geography and boundaries among British and Hungarian geographers, 1915-1919

Charles Withers¹, Róbert Györi²

Session 139/I Tue Sept 09

Room JEK 9:00am - 10:30am

To be or not to be ... mobile. (Im)Mobility in left behind areas

Session-Chairs:

Daniel Göler, Jennifer McGarrigle

The aim of the session is to discuss the question of being mobile or immobile in left behind areas from different perspectives. We focus on the municipal/regional dimension of left-behindness and concentrate on the wide variety of forms of (im)mobility, i.e. temporary, permanent and circular, commuting, digital mobility etc. How far is (im)mobility part of an individual coping strategy and, thus, a

step to a problem solution for stayers and movers and, not least the community or region as a whole? We welcome empirically as well as theoretically informed contributions from all fields of (im)mobility and migration studies.

Presentations:

Does “left-behindness” matter for staying in place?

Erik Sacha, Mila Miletić

Otto-Friedrich-University Bamberg, Germany

Migration and return: Establishing or re-establishing the bonds of place attachment

Paula Andreea Tufiş¹, Ana Sofia Santos², Jennifer McGarrigle³, Mădălina Manoilă⁴, Barbara Staniscia⁵

¹Faculty of Sociology and Social Work, University of Bucharest; ²Faculty of Psychology, University of Lisbon; ³Institute of Geography and Spatial Planning, University of Lisbon; ⁴Research Institute for the Quality of Life (ICCV), Romanian Academy of Sciences; ⁵Department of European, American and Intercultural Studies, Sapienza University of Rome

To migrate abroad or not?– Aspirations for international mobility and immobility under the influence of own migration experience

Monica Şerban¹, Paula Andreea Tufiş², Mădălina Manoilă¹

¹Research Institute for the Quality of Life (ICCV), Romanian Academy of Sciences; ²Faculty of Sociology and Social Work, University of Bucharest

Exploring left-behindness and (im) mobility in Europe: A six-country comparative analysis

Session 145

Room MUS

Tue Sept 09

9:00am - 10:30am

Decolonise political ecology? New epistemologies facing socio-ecological crises

Session-Chairs:

Salvo Torre, Isabella Giunta, Valerio Bini

This session explores recent shifts in political ecology, focusing on the decolonisation of knowledge and critique of colonial epistemologies. It addresses how ecological research practices and categories are being redefined in light of ongoing socio-ecological crises, wars, and global inequalities. The session brings together contributions on epistemic communities, ecological conflicts, and community-based knowledge production, aiming to assess whether political ecology can evolve into a decolonial and activist analytical framework.

Presentations:

Decolonizing political ecologies of developmentalism from the peripheries of Europe: Revisiting environmental movements in Türkiye

Ethemcan Turhan¹, Cem İskender Aydın²

¹University of Groningen, Netherlands; ²Boğaziçi University, Türkiye

Political ecology and decolonising research practices: an imperative and a chimera

Alberto Diantini¹, Andrea Rizzi²

¹University of Ferrara, Italy; ²University of Bologna, Italy

Transforming heritage-scapes and community engagement in Central Asia: Could we adopt a political ecology approach?

Andrea Zinzani

University of Bologna, Italy

Re-imagining cosmopolitanism in the capitalocene: Decolonial options for future prospects

Nicolò Matteucci

Sapienza University of Rome, Italy

Session 186

Tue Sept 09

Room THE

9:00am - 10:30am

Geography in action: Enhancing outdoor education for a dynamic learning experience

Session-Chair:

Ana Pejdo

Fieldwork is a form of experiential learning where students engage with authentic reality. During outdoor education students are able to connect theory to practice, enhance spatial awareness, develop practical skills, foster environmental awareness and promote dynamic learning experience. The value of fieldwork increases when conducted in an interdisciplinary manner, as it encourages cross-curricular connections and enables a more comprehensive experience, understanding of spatial reality and better understanding of complex scientific concepts. The objective of this session is to examine teachers' and student's attitudes and experiences during outdoor education connected to geography teaching and learning on all education levels.

Presentations:

Mapping in kindergarten (KS 1): the contribution of fieldwork trips in the school's area

Justine Letouzey-Pasquier, Julien Bachmann

University of Teacher Education Fribourg (HEP FR), Switzerland

The city as a pedagogical device: the perspective of youth engagement in Palermo

Valentina Mandalari, Marco Picone, Fausto Di Quarto

University of Palermo, Italy

Outdoor learning in the nature lab – experiences from a lecture hall for geographers?

Wolfgang Fischer, Jörn Harfst, Danko Simic

University of Graz, Austria

Outdoor education in Croatia's educational system: are we doing enough?

Ana Pejdo, Jadranka Brkić-Vejmelka

University of Zadar, Croatia

Session 187

Tue Sept 09

Room SR2

9:00am - 10:30am

Speculative cartography and futuring for spatial degrowth – a co-imaginative mapping-workshop (Part I)

Session-Chairs:

Jana Gebauer, Sarah Ware, Corinna Dengler, Luciana Maia, Lilian Pungas

This interactive three-hour workshop invites participants to explore speculative cartography and envision desirable futures for a changing Europe. In Part 1, participants respond to readings from speculative fiction, critical cartography, and degrowth, co-imagining a map of future places, practices of care, and pathways of transformation. These mapped ideas are further developed in Part 2, where we co-create and playfully exhibit future artefacts that express and challenge visions of a good life for all. Facilitated by interdisciplinary degrowth scholars, the workshop welcomes participants from all backgrounds. No experience is needed; materials are provided. Full participation is encouraged but not required.

Session 202/I

Tue Sept 09

Room ARS

9:00am - 10:30am

Transformative education put into practice

Session-Chairs:

Johanna Ruhm, Christiane Hintermann

In the context of geography teaching, transformative learning has recently been discussed as an important concept with the potential to fundamentally change the way learners experience and conceptualize the world as individuals and as part of society. At the same time, it can be understood as a possibility for a collective emancipation process. Given that interrelated crises, such as social inequalities or climate change are central to the subject of Geography, it seems particularly promising for implementing transformative education in schools. The aim of the session is to present and discuss possible criteria for such educational processes.

Presentations:

Transforming dystopias. Transformative geographical education as a process of shaping the world for the future

Gabriel Bohn

University of Bonn, Germany

The potential of the Dutch alternative approach developmental education (Ontwikkelingsgericht Onderwijs, 'OGO') for the realization of transformative education in the subject of geography

Julia Klumparendt

University of Bonn, Germany

"Why Should I?" Collaborative teaching of humanitarian action

Tal Yaar¹, Sonja Danner²

¹*Oranim College of Education, Israel.;*

²*KPH Vienna, Austria*

Water in the anthropocene: Urban rivers: greening or renaturalization?

Session-Chairs:

Joaquim Farguell,
Albert Santasusagna Riu

While Greening refers to the creation of green areas in cities for leisure purposes, prioritizing the sociability of the river space, renaturalization focuses on the restoration of its ecological functioning and the hydro-geomorphological processes involved. This approach often limits the accessibility of people to the river because priority to natural flora development and river channel shape conservation is given. On the other

hand, greening projects have great social acceptance as they are seen as a way of using the river space as a healthy environment, providing environmental, educational and leisure values. A debate based on the aims set will decide the river use.

Presentations:

Assessment of nitrogen and phosphorus pollution based on multi-source data and the InVEST model in the Henan section of Yellow River Basin, China

Xu Yang

Institute of Geographical Sciences, Henan Academy of Sciences, China

Pharmaceutically active compounds in rivers and streams of the Budapest metropolitan area: adsorption in sediments and efficiency of the riverbank filtration

Advancements of AI in Human Geography

Session-Chairs:

Silvio Heinze, Robert Musil

The integration of Artificial Intelligence (AI) into human geography has opened new horizons for spatial research. AI offers innovative tools and methodologies that allows to address new and complex geographical questions. This session aims to convene researchers at the forefront of this interdisciplinary nexus to share recent developments, theoretical advancements, and empirical findings. Breakthroughs in machine learning, deep learning, and data analytics have significantly impacted the ways in which

spatial data is collected, processed, and interpreted. AI techniques are enhancing our capabilities to analyze large-scale geospatial datasets. These advancements are reshaping research in physical geography, human geography, environmental studies, and urban planning.

Presentations:

GeoAI and spatial analysis: A new frontier for sustainability and urban inequalities

Simona Epasto, Paolanti Marina
Università di Macerata, Italy

Application of AI for forest ecosystem dynamics evaluation and predictive modeling in Central Europe

Khalil Gholamnia, Lucie Kupková
Charles University, Czech Republic

Unveiling urban dynamics: Extract social structures from Street View imagery with machine learning

Session 112

Tue Sept 09

Room MUS

2:00pm - 3:30pm

Geographies of energy transition in a changing Europe

Session-Chairs:

Justyna M. Chodkowska-Miszczuk,
Agata Lewandowska, Dominik Zieliński

One of the critical challenges of a changing Europe is building long-term energy security that guarantees economic development and a viable society. Geographical knowledge generated at the interface of human and physical geography, including cartography and GIS, is leading in creating diagnoses and strategies, which are essential from the point of view of creating supranational alliances. Research is required on the differentiation of the energy mix, both from the point of view of the regional and local systems. The significance of geographical research is manifested in the need to apply a comprehensive and multi-dimensional perspective of these changes, which, taking into account spatial and socio-economic repercussions, also allow for analysis of the problems in other sectors, e.g. agriculture, transport or the functioning of households, both in urban and rural areas.

Presentations:

Local collective action initiatives for a sustainable transition:

Non-institutional participation in the province of Granada, Spain

Marina Frolova, Belén Pérez-Pérez,
Francisco Javier Rodríguez-Segura,

Changing migration landscape in Europe: Geographies of segregation and integration issues of migrants and refugees from Ukraine

Session-Chairs:

Martin Šimon, Katalin Kolozsvári-Kovály

The session is focused on migration and integration issues in Europe with a special focus on migrants from Ukraine. More than 7 million Ukrainian citizens fled to Europe in 2022, mostly women and children. This population movement created unprecedented challenges and humanitarian crises, demanding quick and flexible public policies and involvement of civic society. Socio-economic impact on host societies is profound, as divergent approaches to integration efforts, access to housing, health care

and labour market, inter-ethnic relations and legislation are present among EU countries. The session will illustrate how the Ukrainian crises transformed the migration and economy in Europe.

Presentations:

Socio-economic impact and integration of Ukrainian refugees in Italy

Session 162/I Tue Sept 09
Room SIS 2:00pm - 3:30pm

New forms of living in the mountains. Spaces, times and new economies

Session-Chairs:

Dr. Nicolò Fenu, Paolo Giaccaria,
Samantha Cenere

In recent years, mountain areas have witnessed renewed interest and patterns of repopulation, challenging traditional representations and reshaping both individual life trajectories and collective political dimensions. The so-called “new mountaineers” – including amenity migrants, neo-rurals, urban escapees, retirees, and artists – are united by the desire to become “mountaineers by choice.” Their lifestyles often revive historical patterns of mobility, multi-residentiality, and occupational plurality. These dynamics offer geography key insights into alternative economies, digital mobilities, and relational geographies. This session aims to explore the diverse ways of living in the mountains, focusing on temporality, mobility, and occupational flexibility, and developing a framework through concepts, theories, and methods.

Presentations:

Work and financial security in the alps according to the 10th Report on the State of the Alps

Naja Marot, Tadej Bevk, Maja Debevec, David Klepej, Pina Klara Petrovič Jesenovec, Nina Stubičar
University of Ljubljana, Biotechnical Faculty, Slovenia

Session 174/I Tue Sept 09
Room JOS 2:00pm - 3:30pm

Urban housing dynamics in central, eastern, and south-eastern Europe

Session-Chairs:

Ivan Ratkaj, Robert Musil, Aljoša Budović, Nikola Jocić

This session explores housing dynamics in Central, Eastern, and Southeastern Europe, focusing on how global processes such as financialization, migration, and sustainability discourses intersect with local legacies and planning frameworks in the European semi periphery. Contributions engage with diverse urban contexts to examine demographic shifts, suburbanization, post

socialist transformations, and the evolving role of housing systems. Emphasizing both empirical case studies and theoretical reflection, the session adopts a comparative and interdisciplinary lens. It aims to deepen understanding of regional housing trajectories shaped by complex interactions between inherited structures, contemporary challenges, and uneven patterns of urban development across the region.

Presentations:

Positioning the (semi-)periphery: Contextualising central, eastern and southeastern European housing systems

Felix Böhmer

KU Leuven, Belgium

Re-framing comparative housing research – Some implications of re-scaling on cities, and re-centering on the (semi) peripheries of Europe

2:00pm - 3:30pm

Dialectics of circular migration: Conceptual and policy challenges for Europe

Session-Chairs:

Sándor Illés, Éva Gellérné Lukács

We deal with the international circular migration which has globally become a buzzword. We concentrate on a general inner feature of the phenomenon, which is the common root of false ideas and measures, namely their dual nature. This is a type of migration as a simple event or a complete system. The authors try to contribute to the clarification of the general concept of human circular mobilities to foster scholars for sophisticated thinking and stakeholders for adequate policy making in global, regional, national, and local levels. Finally, we propose the core elements of a new legal status, namely circulator.

Presentations:

Circular student migration dynamics between Central Asia and Southeast Europe: An analysis of socio-economic integration and transnational challenges

Rumiana Jeleva¹, Lyubomir Pozharliev², Tim Leibert³, Markus Kaiser⁴

Micro-marginality and fragmentation in urban areas

Session-Chair:

Dolores Sánchez-Aguilera

Marginality is not exclusive to remote or rural areas but increasingly manifests within cities through processes of micro-marginality and spatial fragmentation. These are shaped by neoliberal policies, financial capital mobility, real estate pressures, urban tourism, and gentrification – factors that deepen inequality. This session seeks to establish a conceptual framework for analysing urban micro-marginality, its drivers and consequences, and its interplay with fragmentation. Emphasis will be placed on appropriate analytical methods across scales and diverse case studies. Contributions should also critically assess public policies and stakeholder roles in addressing marginality in today's complex urban contexts.

Presentations:

Residential insecurity and social exclusion. Squatting geographies of Barcelona

Dolores Sánchez-Aguilera, Anna Torres-Delgado, Josep Coma-Guitart

University of Barcelona, Spain

Reproduction of marginality and renewed urban fragmentation in the northeastern regeneration front of Barcelona

José Ignacio Vila Vázquez

Session 199 Tue Sept 09
Room THE 2:00pm - 3:30pm

How to communicate geographical research? For a geography beyond the boundaries of the academy

Session-Chair:

Massimiliano Tabusi

This session explores how geographical research can be communicated beyond academia, highlighting the importance of making geographical thinking accessible to wider audiences. It examines both theoretical perspectives and practical examples of public engagement through creative formats such as video, sound, literature, and

performance. Participants will reflect on the value, challenges, and methods of dissemination, sharing experiences and tools that bridge academic research and society. The session also invites collaboration with EUGEO's outreach efforts, particularly the GeoNight initiative, to strengthen the role of geography in public discourse.

Presentations:

Teaching science communication to undergraduate geography students

Marielle Zill

Universiteit Utrecht, Netherlands

The dissemination of a geographical film beyond the academy. Findings from the project Movimento Fermo

Silvy Boccaletti

2:00pm - 3:30pm

From spaces of affirmation to spaces of contestation: Transformative and reflexive geography teacher education in uncertain times

Session-Chairs:

Fabian Pettig, Uwe Krause, Nicole Raschke

Environmental and sustainability education (ESE) presents challenges due to its complexity, urgency, and ambiguity. Geography education, with its planetary perspective, offers potential for pedagogies that address such 'super-wicked problems'. This session explores transformative and reflexive approaches in geography teacher education that foster ethical engagement, boundary-crossing, and reflexivity. Emphasis lies on creating relational learning spaces that mediate diverse experiences and worldviews. These pedagogies move beyond affirming the status quo, instead embracing education as a space of contestation, possibility, and societal transformation – sensitive to diversity, hegemony, and the need for new ways of knowing, feeling, and acting.

Presentations:

From relativism to responsibility: Theoretical perspectives and implications for Teacher Training

Elena Flucher

University of Graz, Austria

Steps and sounds: Towards embodied experiences of soil and surface worlds in transformative education

Eva Nöthen¹, Verena Schreiber²

¹University of Bonn; ²Pädagogische Hochschule Freiburg, Germany

Session 207//

Tue Sept 09

Room AZS

2:00pm - 3:30pm

Residential preferences and housing aspirations in times of crisis. Changing patterns, concepts and methods

Session-Chair:

Elisabeth Gruber

Location preferences and home-making strategies in Europe have changed in recent years, particularly in the context of the current housing crisis. While residential mobilities and housing aspirations are discussed in academic research, this often happens separately. This session therefore brings together presentations dedicated to observing (changing) residential patterns and housing aspirations across Europe. The session will cover research focusing on urbanisation trends, residential location preferences and individual preferences regarding housing types and characteristics. The aim is to discuss residential trends next to housing preferences, bringing together different perspectives, methodologies, approaches and concepts.

Presentations:

Global influences on migration patterns: Dynamics and developments in the Vienna metropolitan region over the past 20 years

Max Aichinger, Peter Görgl

Modul5, Austria

Changes in the residential movements in the Budapest metropolitan area. Accelerating suburbanization and/or reurbanization?

Julia Schuchmann

John Von Neumann University, Hungary

Long-term growth of urban areas as a function of their location attributes

Boris A. Portnov

University of Haifa, Israel

Mapping residential preferences regarding Europe: Insights into Canada's and Czechia's young adults' perspectives

Tue Sept 09

Room SR2

4:00pm - 5:30pm

Quantitative approaches for disabled mobility studies: Rationale, issues, pitfalls and results

Session-Chairs:

Frédéric Dobruszkes, Enka Blanchard

The aim of this session is to discuss the rationale behind using quantitative or mixed quantitative-qualitative approaches to analyse disabled mobilities, an area which is still in its infancy. Indeed, the field of disability studies is currently dominated by theoretical and analytical approaches, which often explicitly reject quantitative methods. Furthermore, transport geography and almost all quantitative studies of accessibility have focused on 'average people', disregarding those with various impairments (e.g., physical, sensory or cognitive). The presentations in this session will address these limitations in various geographical contexts.

Presentations:

Is our network really inclusive? Public transport accessibility gaps suffered by the disabled and the fragile: Evidence from Strasbourg

Alexis Conesa

University of Strasbourg, France

Evaluating and mapping transport poverty: The impact of Mobility as a Service (MaaS) on travel patterns among persons with reduced mobility in Tokyo and Osaka, Japan

Binrong Lin

Kyushu University, Japan

The impact of transfers on public transport travel times: An extrapolation to disabled persons

Maël Dupriez, Frédéric Dobruszkes

Brussels Free University (ULB), Belgium

Lack of redundancy as a determinant of disabled mobilities

Enka Blanchard

CNRS, France

Session 132

Tue Sept 09

Room ARS

4:00pm - 5:30pm

Ordinary heritage in transformation. Developers' interventions and private residential actions on historic housing stock

Session-Chairs:

Sandra Guinand, Hanna Szemzo, Viktoria Eva Lelek

Over the last decade, historic housing has become the subject of investment by real estate developers, service companies and individual owners alike, resulting in a substantially modified function of this housing stock. As a result, boundaries between the cultural, the political, and the market have become blurred, requiring critical attention to preservation and heritage constructs especially around ordinary historic objects, also reorienting their tangible and intangible significance. Looking at historic residential buildings as "ordinary" heritage, this session deals with these questions and issues, in particular new heritage expressions, place identity, social and technical innovations/re-sponses, and spatial.

Presentations:

Heritage and spatial transformations: the case of Marseille's historic city centre

Margot Bergerand

Aix-Marseille Université, France

Balancing decarbonization and heritage conservation: The living lab approach at Terrassenhaussiedlung, Graz/Austria

Andrea Jany

University of Graz, Austria

Replacement or refurbishment? Transformation of the historic housing stock (Gründerzeit) in Vienna and Budapest

Viktória Éva Lélek

Austrian Academy of Sciences

A multidisciplinary categorization of challenges of reuse of residential buildings

Session 133

Tue Sept 09

Room THE

4:00pm - 5:30pm

Gamification, metaverse and transhumanism for a different geography

Session-Chairs:

Luisa Carbone, Luca Lucchetti,
Miriam Noto, Tony Urbani

The session explores how digital innovations redefine Geography through the fusion of physical and digital realities: gamification transforms the spatial experience, making the understanding of territories interactive and playful; the Metaverse redefines geographical boundaries and social interactions, with new immersive worlds. Finally, transhumanism pushes and expands human capacities, redesigning the interaction between body and space. The session discusses the new theoretical-practical and interpretative models of Geography immersed in a multi-versal and coexisting society outside space-time, where a geolocated point can become a node of a Euclidean geometry, but also something "indefinite", still unknown.

Presentations:

Transforming nature exploration: Gamification for awareness and conservation

Catia Prandi

University of Bologna, Italy

From game to reality – How Black Myth: Wukong boosts Shanxi tourism

Yushu Liu, Dolores Sánchez-Aguilera

University of Barcelona, Spain

The concept of gamification and the potential effect of video games on tourism in Romania

Session 137

Tue Sept 09

Room MUS

4:00pm - 5:30pm

Geographies of precarious housing and homelessness: Navigating commodified housing markets in times of crisis

Session-Chairs:

Judith Schnelzer, Philipp Schnell

This session explores precarious housing and homelessness in the context of commodifying housing markets and ongoing housing inequality. Decreasing housing affordability, tenure insecurity, and state deregulation intensify housing inequalities. While these dynamics disproportionately affect marginalised groups, i.e., low-income households, pressures on housing markets expand and entangle other residents as well. This session will focus on contributions that address how tenants navigate precarious housing, displacement, and homelessness, how inequality is experienced and resisted, and how policy and market dynamics reshape urban spaces. Contributions will explore facets of homelessness and precarious housing. We welcome empirical, conceptual, and methodological work or political interventions.

Presentations:

Everyday politics of older women experiencing homelessness in Czech Republic

Petra Tamasova

Masaryk University, Czech Republic

Regional aspects of the healthcare system for people experiencing homelessness in Hungary

Noémi Annamária Vajdovich

Eötvös Loránd University - Doctoral School of Earth Sciences (Budapest, Hungary); Metropolitan Research Institute - Városkutatás Kft. (Budapest, Hungary)

Session 162/II

Tue Sept 09

Room SIS

4:00pm - 5:30pm

New forms of living in the mountains. Spaces, times and new economies

Session-Chairs:

Nicolò Fenu, Paolo Giaccaria, Samantha Cenere

In recent years, mountain areas have witnessed renewed interest and patterns of repopulation, challenging traditional representations and reshaping both individual life trajectories and collective political dimensions. The so-called “new mountaineers” – including amenity migrants, neo-rurals, urban escapees, retirees, and artists – are united by the desire to become “mountaineers by choice.” Their lifestyles often revive historical patterns of mobility, multi-residentiality, and occupational plurality. These dynamics offer geography key insights into alternative economies, digital mobilities, and relational geographies. This session aims to explore the diverse ways of living in the mountains, focusing on temporality, mobility, and occupational flexibility, and developing a framework through concepts, theories, and methods.

Presentations:

The choice is yours – Applying a discrete choice experiment to a dynamic adaptive policy pathway for resident-lead rural development

Alice Wanner, Meike Jungnickel, Ulrike Pröbstl-Haider

University of Natural Resources and Life Sciences, Vienna, Austria

Blockchains and tokenization for social and community economies in mountain areas

The relevance of diverse information collection in research on transition of rural areas

Session-Chairs:

Ewa Karolina Korcelli-Olejniczak,
Jerzy Bański

The aim of the session is to explore what role different ways of collecting data plays in how knowledge on the transition of rural areas is built. The evidence presented derives from research carried out in different pilot regions across Europe as a major component of the HORIZON EUROPE Rural Sustainability Transitions through Integration of Knowledge for improved policy processes (RUSTIK) project. Based on a Living Lab approach, data and information needs are defined and data collection methods selected to develop policy initiatives and solutions that can be transferable, replicable, serve as best practices for other European contexts and capacities of local actors.

Presentations:

Combining data and stakeholder engagement to support rural transitions: Lessons from small rural businesses in the Nock-region-Oberkärnten living lab (Austria)

Green and blue infrastructure and urban health

Session-Chairs:

Chiara-Charlotte Iodice,
Anna Kajosaari, Noriko Otsuka

Urban green and blue infrastructure (GBI) support health, well-being, and climate adaptation. However, due to discrepancies in the provision of these infrastructures, not all urban residents have the same opportunities to benefit from GBI in enhancing their health and well-being. This session addresses challenges in measuring and ensuring equitable distribution of health-promoting GBI. Key topics include the role of

GBI in urban transformation and climate adaptation, equity and justice in access, multifunctional approaches to maximizing benefits, governance perspectives, and citizen participation in planning and maintaining GBI projects, as well as links between GBI and individual or community health.

Transborder and cross-border transportation: Connectivity, accessibility, and mobility

Session-Chairs:

Chia-Lin Chen, Jie Huang, Jiaoe Wang

As the world becomes more interconnected, Transborder and Cross-border Transportation (TCT) plays a vital role in economic growth and cultural exchange. In light of disruptions such as Brexit and armed conflicts, TCT research must reassess both 'hard' (infrastructure) and

'soft' (policy/service) components. This includes identifying infrastructure gaps, cultural barriers, and development challenges, while advancing theoretical and methodological approaches to measuring connectivity, accessibility, and mobility. This session includes studies on the border effects of maritime shipping, air travel, and railway networks across diverse regions, including the Greater Bay Area in China, Eastern Poland, and Northern Ireland.

Presentations:

The relationship between people, technology and space in the AI era

Session-Chairs:

Runlin Yang, Shan Yang

In the AI era, emerging technologies such as remote work are reshaping spatial configurations by enhancing individual freedom, mobility, and agency within space. Unlike previous eras where spatial concentration dominated, AI enables a decoupling of residence from workplace, allowing individuals to select living environments more freely. This shift challenges longstanding patterns of spatial inequality and centralization. The session investigates how AI-driven work models transform the relationship between people, technology, and space, offering new insights into future regional development trajectories.

9:00am - 10:30am

Political graffiti and public expressions in the symbolic urban landscapes of a changing Europe

Session-Chair:

David Hána

As Europe faces political, social, and economic changes, cities emerge as key arenas for public expression. This session explores political graffiti, stickers, and other urban (visual) communications as reflections of, and reactions to, these changes. From slogans to street art, such expressions assert views, challenge narratives, and claim space in contested urban landscapes. Through case studies from different regions, we will discuss how individuals and groups use symbolic public space to negotiate their place within a transforming Europe, and how these visual forms express political opinions and contribute to the symbolic power of public spaces.

Presentations:

9:00am - 10:30am

Europe in the making - The changing religious landscapes

Session-Chair:

Gianfranco Battisti

As we all know, faith always becomes culture, also through environmental transformation (especially buildings) that often defy the centuries. Nowadays in all countries the religious composition of the population is changing rapidly

and this general reshuffling erases the once common identification between a country and a religion. The question then arises: in an era of change like the present, is what appears to be in doubt the cultural heritage of the various religions or rather the core of the different faiths? To answer this question, it is first necessary to consider the typology of geographical phenomena that can be encountered.

Presentations:

Religion as a marker of national identity - the changing pattern of Europe

Peter Jordan

Austrian Academy of Sciences

Investigating the regional aspects of declining ecclesiastical religiosity in Hungary

Antal Tóth, Csaba Patkós

Eszterházy Károly Catholic University, Hungary

Urban spaces for well-being and care in a changing Europe

Session-Chairs:

Maria Lindmäe, Mizan Rambhoros

Urban environments shape the everyday lives of individuals through their design, accessibility, and affective experiences. Optimising spaces that accommodate care tasks and foster mental and physical wellbeing has become particularly important for improving the life quality of different vulnerable groups whose needs are often overlooked in urban planning. This panel focuses on the intersection of care, accessibility and affective experiences to explore how urban design can support the well-being of diverse populations, especially from the following perspectives:

- Affective Experiences and Well-Being in Urban Spaces
- Public Space Accessibility and Care Responsibilities
- Urban Design for Mental and Physical Health

Presentations:

Building child-friendly cities: Lessons from the international child-friendly cities initiative and its implementation in Europe

Sara Mellinato

Sapienza Università di Roma, Italy

Urban spaces of caring communities and new urban cultures of care in Austria, Hungary, and the Netherlands

Dóra Gábel¹, Valentin Fröhlich², Florian Pimminger²

¹HUN-REN Centre for Economic and Regional Studies, Hungary; ²Johannes Kepler University, Linz, Austria

Psychiatric care in the city – Human scale and social condensers

TU Wien, Austria

What do children need? The role of informal open spaces in planning practices to foster children's well-being in suburbia

Tilman Teske, Sarah Friedel, Angela Million

Technical University Berlin, Germany

ism, the session aims to trace continuities and ruptures in centre-periphery relations over the last two centuries. By focusing on historical and contemporary extractive landscapes, it seeks to better understand territorial transformation, lingering inequalities, and potential trajectories. The session also aspires to foster a long-term research community and collaborative publications on these themes.

Presentations:

Conditioned urban growth & hidden geographies of coal extraction, storage and usage. Bulk landscape and the case of coronel sacrifice zone, Chile.

Miguel Angel Delso Páez, Karolina Krośnicka

Gdańsk University of Technology, Poland

Transformation of a European extractive landscape – The case of the Austrian Styrian iron route

Jörn Harfst, Wolfgang Fischer

University of Graz, Department of Geography and Regional Science, Austria

Session 161 Wed Sept 10
Room ALB 9:00am - 10:30am

Extractive landscapes: bridging different disciplinary perspectives through the history of European marginal territories

Session-Chairs:

Mosè Cometta, Johannes Herburger

This session investigates the evolving role of extractive and peripheral territories – especially in Europe – through historical and interdisciplinary lenses. It examines how past and present extractive dynamics have shaped socio-economic and spatial development outside urban cores. Bridging political ecology, rural and urban studies, and eco-Marx-

Extractive hinterlands and territorial governance: The Scottish highlands and islands as an operational landscape

Bilgesu Sever

Bilkent University, Ankara, Türkiye

Digging and filling for the metropolis: the trajectories of quarry territories in the Seine Valley (France) in the light of legal and market regulation

Session 166-173/I Wed Sept 10
Room SIS 9:00am - 10:30am

New trends in the electoral geography in Europe

Session-Chairs:

Christian Vandermotten,
Gilles Van Hamme

The session will include empirical contributions to the electoral geography of Europe as well as more theoretical papers, for instance on the respective contributions of sociology and geography to the understanding of the electoral patterns. A specific attention is given to the changing electoral patterns in the metropolitan areas, in the former manufacturing areas, in the peripheral regions, etc. Contributions discuss at different scales, including the same phenomena at different geographical scales.

Presentations:

The spatialisation of new electoral cleavages in Europe since the beginning of the 21st century

Christian Vandermotten

Société royale belge de géographie, Belgium

Local and transnational: The political geography of European parliamentary elections

François Hublet

Groupe d'études géopolitiques, Paris, France

Between rural and urban. Specificity of political behaviour in small towns of Poland

Michał Konopski

Institute of Geography and Spatial Organization, Polish Academy of Sciences, Poland

Geographical aspects of the 2024 redistricting of Hungarian parliamentary constituencies

Tamás Kovalcsik

HUN-REN Centre for Social Sciences, Hungary

Session 200 Wed Sept 10
Room ARS 9:00am - 10:30am

Private developers and world heritage city: Tensions, negotiations and arrangements

Session-Chairs:

Sandra Guinand, Gábor Oláh, Etienne Berthold, Maryse Boivin, Maria Gravari-Barbas, Laura Brown

Urban heritage is a powerful vector for development, identity, and tourism (Gravari-Barbas, 2020). While it has mainly been studied from public policy perspectives (Guinand, 2015), the role of private players in Unesco-listed sites remains less explored. Yet, in a context where heritage is becoming a commodity (Berg, 2017), offering a comparative advantage, or suffering the effects of the financialization of real estate (Risager, 2021) or neglect, private actors, semi-public or non-profit entities are key actors in renovating the historic fabric. This session looks at heritage processes characterised by complex public-private negotiations, arrangements and tensions (Berthold & Mercier, 2015) in different contexts.

Presentations:

When memory meets the market: Investor-led urbicide and heritage sites

Maja Jović

University of Westminster, United Kingdom

Urban tensions around world heritage: the landscape of light in the historic center of Madrid

María García-Hernández, Manuel de la Calle Vaquero, Héctor Aliaga de Miguel, Beatriz Martínez Parra

Complutense University of Madrid, Spain;

Time matters: Chrononomies of UNESCO World Heritage governance

Session 113/II Wed Sept 10
Room JOS 11:00am - 12:30pm

Green and blue infrastructure and urban health

Session-Chairs:

Chiara-Charlotte Iodice,
Anna Kajosaari, Noriko Otsuka

Urban green and blue infrastructure (GBI) support health, well-being, and climate adaptation. However, due to discrepancies in the provision of these infrastructures, not all urban residents have the same opportunities to benefit from GBI in enhancing their health and well-being. This session addresses challenges in measuring and ensuring equitable distribution of health-promoting GBI. Key topics include the role of GBI in urban transformation and climate adaptation, equity and justice in access, multifunctional approaches to maximizing benefits, governance perspectives, and citizen participation in planning and maintaining GBI projects, as well as links between GBI and individual or community health.

Presentations:

Research on parks and green spaces policies through health promotion in Japan's SDGs future cities in the Kansai metropolitan region

Tomoko Miyagawa¹, Noriko Otsuka^{2,3}, Hirokazu Abe³

¹Wakayama University, Japan; ²ILS Research GmbH, Germany; ³Osaka University, Japan

Citizen engagement and just adaptation to flooding in Amsterdam

Session 117/II Wed Sept 10
Room THE 11:00am - 12:30pm

Transborder and cross-border transportation: Connectivity, accessibility, and mobility

Session-Chairs:

Chia-Lin Chen, Jie Huang, Jiaoe Wang

As the world becomes more interconnected, Transborder and Cross-border Transportation (TCT) plays a vital role in economic growth and cultural exchange.

In light of disruptions such as Brexit and armed conflicts, TCT research must reassess both 'hard' (infrastructure) and 'soft' (policy/service) components. This includes identifying infrastructure gaps, cultural barriers, and development challenges, while advancing theoretical and methodological approaches to measuring connectivity, accessibility, and mobility. This session includes studies on the border effects of maritime shipping, air travel, and railway networks across diverse regions, including the Greater Bay Area in China, Eastern Poland, and Northern Ireland.

Presentations:

Beyond borders: the role of Trieste in territorial development

Francesca Sinatra, Giuseppe Borruso
University of Trieste, Italy

Evaluating the causal impacts on spatial satisfaction sentiment of Shenzhen-Hong Kong regional integration policies: An interrupted time series study leveraging large language models

Luyao Niu¹, Yurun Wang¹, Wenjia Zhang²

Session 122 Wed Sept 10
Room SR2 11:00am - 12:30pm

Sacrifice zones: Configurations, representations, practices, and reterritorialization projects in Europe

Session-Chairs:

Federica Epifani, Gustavo D'Aversa,
Patrizia Domenica Miggiano

"Sacrifice zones" emerge from power relations through governance and planning that designate territories as expendable for purported development gains. Geographically, they raise spatial issues (distribution of harms and benefits), territorial concerns (planning decisions and actors involved), and identity questions (how inhabitants experience and reshape space). Such processes operate at scales from micro (individual experiences) to global (non-European areas serving Europe), formed by relationships of domination. This session invites theoretical contributions and European case studies that analyze cultural representations and resistance practices aimed at redefining and regenerating these places.

Presentations:

Rethinking marginality through the geographies of children living in neighborhoods "of exception". A comparison between Borgo Marina, Rimini, and Al Hussein Camp, Amman

Veronica Cucci

La Sapienza Università di Roma, Italy

Spaces of resistance and "Sacrifice Zones": Comics as a tool for socio-ecological mobilization in southern Italy

Session 153 Wed Sept 10
Room ALB 11:00am - 12:30pm

Migrant transnationalism

Session-Chairs:

Ádám Németh, Yuri Kazepov

This session aims to explore the connection between space and migrant transnationalism by examining a range of topics, including the following. 1) Conceptualization and operationalization of migrant transnationalism. 2) Migration "corridors" and the flow of resources (e.g. remittances, investments) in the transnational space – spatial patterns and their impacts on socio-economic and political processes. 3) How transnational engagement influences spatial behaviour (e.g., regular visits, circular labour migration), personal relationships (e.g., family members left behind, social networks in the host country) and subjective well-being. 4) The way emotional ties to multiple places shapes people's identities and their migration intentions/decisions.

Presentations:

An integration–transnationalism matrix analysis of Hungarian migrants: Evidence from an online survey

Csilla Zsigmond, Eszter Kovács

HUN-REN Centre for Social Sciences, Institute for Minority Studies, Hungary

The digital inclusion of transnational migrants and transnational households

Dušan Drbohlav¹, Eva Janská¹, Jiří Hasman¹, Zdeněk Čermák¹, Adrian Bailey²

Wed Sept 10

Room SR1

11:00am - 12:30pm

The changing European rural landscape: Land concentration, monocultures, and biodiversity loss

Session-Chairs:

Pierluigi De Felice, Marilena Labianca,

Maria Gemma Grillotti Di Giacomo, Silvia Siniscalchi, Luisa Spagnoli, Teresa Amodio

This session explores the deep transformations affecting European rural landscapes, focusing on land concentration, monoculture expansion, and their environmental and social consequences. It examines how agricultural intensification, driven by EU policies and global markets, threatens biodiversity, ecosystem services, and rural livelihoods. The session includes contributions adopting a diachronic perspective to assess sustainability challenges, socio-economic impacts (such as depopulation and inequality), and the changing role of rural communities. By addressing cultivation practices, governance, and landscape evolution, the session aims to critically reflect on the future of Europe's countryside and the need for more inclusive, resilient rural development models.

Presentations:

The rural landscape as an interpretative paradigm of sustainable agriculture

Maria Gemma Grillotti Di Giacomo¹, Pierluigi De Felice², Marilena Labianca³

¹Association Inter-University Research Group GEEOAGRI LANDITALY; ²University of Salerno; ³University of Foggia

Physical geography toponyms: a friendly tool for a better comprehension of the geomorphological landscape

Session-Chairs:

Francesco Faccini, Andrea Ferrando, Paola Coratza

This session aims to stimulate research that associates toponymy with the

geography of the landscape. There are many different place-names attributed to the types of landforms, geology of the bedrock and hydrogeology features, and often the toponymy also suggests useful information on the vegetation, agriculture and human settlement. A careful interpretation of toponymy of a physical-geographical nature can also provide insights into the understanding of landforms and their evolution through time, and could be used in spatial planning activities, thus allowing it to be considered an original and friendly tool for a better comprehension of the natural and cultural landscape.

Presentations:

Landscape terminology and everyday language

Hannes Palang, Mari Uusküla

Tallinn University, Estonia

The lost names:

The disappearance of glacier names in the Austrian Alps

Regina Falkensteiner

BEV, Austria

Examples of evidence of mismatch between toponyms and landforms in Campania region cartography

11:00am - 12:30pm

Local strategies of empowering rural communities

Session-Chair:

Andreas Koch

Rural communities face complex, locally diverse challenges such as demographic change, economic transformation, and climate impacts. Standardised territorial and centralised governance approaches often fall short due to internal homogenisation and top-down power dynamics. A more promising strategy lies in social-spatial governance that emphasises relational and networked space concepts. These foster local autonomy, decentralise decision-making, and promote civic engagement. Municipalism and communalism, as discussed in critical social geography, aim to build commons-based institutions and egalitarian interdependencies between people, places, and nature. They also address social inequality and align with the UN Sustainable Development Goals, offering a resilient path for rural development.

Presentations:

When bottom-up isn't enough. Local rural perspective between culture wars and false consciousness

Mosè Cometta

Università della Svizzera italiana, Switzerland

Local stakeholders' involvement in co-participatory multi-hazard risk management along the Prut valley

11:00am - 12:30pm

Agronomic production and water resources: Strategies, innovations, and practices for climate change resilience

Session-Chairs:

Lucia Grazia Varasano, Luisa Spagnoli

Ongoing Global Climate Change (CC) indicates that we have entered a period of persistent environmental abnormality, characterized by more frequent and

intense extreme events. Among the most significant risks posed by CC are those affecting agriculture, particularly in terms of water availability and supply, food security, and crop yields. In this context, geographers are called upon to address new global challenges; rather than being mere observers, they must actively engage with innovative practices that can impact multiple dimensions through a combined research-action approach. The session intends to gather both theoretical-methodological thoughts and application-oriented case studies that can help identify and understand best practices for developing sustainable agriculture. The goal is to explore and safeguard traditional water systems, test innovative solutions for water management, and use more resilient genetic resources.

Presentations:

How is agriculture adapting to climate change?

Csaba Vaszkó¹, András Huszár¹, Róbert Barna², Éva Pudleiner³

¹*Green Policy Center, Hungary;* ²*Hungarian University of Agriculture and Life Sciences;*

Transformative worldvisions from the global East? (Post) socialist inspirations for resilience and good life

Session-Chairs:

Lucie Sovová, Janas Gebauer, Anja Decker, Lilian Pungas, Markus Sattler, Sunna Kovanen

In a world marked by climate crisis, political polarization, and geopolitical instability, postsocialist countries in the Global East offer vital, yet under-explored lessons in resilience and transformation. This session challenges “catch-up” development narratives by highlighting the region’s rich history of navigating change. From rural resource management to urban commoning and self-provisioning: interdisciplinary theoretical and empirical contributions revisit transformative concepts like community economies and examine how local communities self-organize, mobilize skills in times of crisis and envision alternative futures. By rebalancing the East-West dynamic, the session aims to uncover lessons for more plural, equitable and sustainable pathways – within and beyond Europe.

Presentations:

Common pool resources, collaborative action, and local knowledge in High Asia

Andrei Dörre

Freie Universität Berlin, Germany

Quiet commoning or, the distributed and informal management of common goods in the urban, public orchards of czechia’s capital city

Session 115/I Wed Sept 10
Room SIS 2:00pm - 3:30pm

The changing and contrasting geographies of railways in Europe

Session-Chairs:

Simon Blainey, Amparo Moyano

Railways in Europe are undergoing an ongoing evolution from national systems comprised primarily of conventional mixed use (passenger and freight) routes to more heterogenous systems with an increasingly fragmented and differentiated nature. At the same time, they are exhibiting a series of paradoxes which operate unevenly over space. This session will explore the geographical impacts of the changes being experienced by European railway systems in a range of spatial and temporal contexts. It will also consider the interactions between railway systems and broader societal phenomena such as post-Covid changes in travel patterns."

Presentations:

The potential for using regional rail in intra-urban commuting in central and eastern Europe

Wojciech Jurkowski

University of Wrocław, Poland

The decline of conventional rail services in low-populated areas amid high-speed rail expansion

Zacarias Grande Andrade, Daniela Henríquez Flores

Session 123/I Wed Sept 10
Room JOS 2:00pm - 3:30pm

The healing city in times of climate change

Session-Chairs:

Susann Schäfer, Soeren Becker, Emanuele Garda

This session explores conceptual approaches to urban health and the idea of healing cities within the context of climate change. It examines the role of green areas in urban environments, particularly their capacity to support and enhance both physical and mental health. Case studies will shed light on how the presence or absence of green spaces influences the prevalence of specific diseases and medical conditions. The session also considers urban policies and projects aimed at strengthening green infrastructures to improve public health. Finally, it invites reflections on or examples of climate change adaptation strategies that link urban nature to human health benefits.

Presentations:

Urban green areas for health in the context of climate change

Marta Rodeschini, Emanuele Garda,
Alessandro Filomeno, Marco Tononi

2:00pm - 3:30pm

Navigating demographic and migration challenges: Data-informed solutions for a changing world

Session-Chairs:

Elīna Apsīte-Beriņa, Zaiga Krišjāne,
Māris Bērziņš

According to the EC, demographic change, along with the green and digital transitions, is a key force shaping Europe's future. Comparable demographic data are essential for designing effective policies in health, labour, education, access to services and territorial development. Due to regional diversity across Europe, policies must be tailored and data-informed, taking into account population composition, migration trends, non-migration factors. This session explores the complex interplay between demographic shifts and migration patterns. By leveraging data-driven approaches, we aim to identify innovative strategies and policy solutions to address the challenges and opportunities presented by migration, ageing populations, and broader demographic transformations.

Presentations:

The impact of contemporary migration patterns in Croatia on age and family structures

Vera Graovac Matassi
University of Zadar, Croatia

Arts-based research in urban geography: Re-imagining urban lifeworlds

Session-Chairs:

Miriam Haselbacher, Philipp Schnell, Wiebke Sievers

Urban spaces are living texts that are shaped by multiple interactions and histories that have unfolded over time. They are marked by unequal power relations that manifest in diverse ways, leading to varying perceptions and experiences among individuals and groups. While qualitative and quantitative research methods have traditionally been used to generate knowledge about urban spaces, arts-based research methods hold the promise to create new perspectives for research and to highlight aspects of lived urbanity that have been unnoticed or under-researched. Hence, they can provide the means and media to re-imagine urban lifeworlds and the ways we approach urban environments.

Presentations:

Urban in the countryside: flows, knowledge, and transformation in rural Europe

Session-Chairs:

Kyra Tomay, Gusztav Nemes

The session explores urban-to-rural migration across Europe, driven by the polycrisis and the quest for sustainable lifestyles. In recent decades, the movement of people, culture, and practices from cities to rural areas has become a significant social phenomenon. Urban migrants bring new knowledge and capital to the countryside, thus have the potential to enhance the sustainability of rural communities, but their arrival can create tensions too. What is the impact of the flow of urban social groups,

values, attitudes, and practices in rural areas? How can they contribute to the sustainability of rural communities?

Presentations:

2:00pm - 3:30pm

Geopolitics of migration and security in a changing Europe

Session-Chairs:

Maria Paola Pagnini, Giuseppe Terranova

This session critically explores the intersection of migration, border governance, and security in a rapidly evolving European geopolitical context – particularly in an international arena that the proponents of this session have described as disordered. It examines how national security concerns and political instability shape divergent migration management models across EU member states, highlighting tensions, solidarity mechanisms, and the impact of migration on regional cohesion. Ongoing conflicts, such as in Ukraine and the Middle East, expose divergent foreign policy stances. The session also addresses cultural change, radicalization, and human rights challenges, offering frameworks for understanding Europe's geopolitical future.

Presentations:

Geopolitics of immigration in a disordered world: the case of the European Union

Maria Paola Pagnini, Giuseppe Terranova

Unicusano, Italy

Women as geopolitical subjects and objects in the context of migration and security

Sonia Malvica¹, Carmelo Maria Porto²

Geopolitics of early modern age: Conflicts, authors, maps and perspectives of a global world

Session-Chair:

Alessandro Ricci

This session invites discusses authors, cartographic representations, and political theories of the early modern age (16th–17th centuries) from a geopolitical perspective. By connecting historical and geographical approaches, it aims to stimulate interdisciplinary debate on how European treaties, territorial conflicts, the rise of nation states, and cartographic tools shaped modern geopolitics. The session highlights the still underexplored geopolitical dimension of early modernity, encouraging contributions on authors, maps, atlases, borders, political realism, and emerging globalisation.

Presentations:

On the political use of geography. The case of Gabriel Chappuys.

Davide Suin

Università degli Studi di Genova, Italy

Geostrategic rhetoric of the map: Decorative elements on early modern cartographic representations of the Adriatic Sea

Lena Mirošević¹, Dubravka Mlinarić²

¹Department of Geography, University of Zadar, Croatia; ²Institute for Migration and Ethnic Studies, Zagreb, Croatia

The heritage of mural cycles. The symbolism of power from the modern age to contemporaneity: The case of the cartographic cycle of the Palazzo Aeronautica in Rome

Carlotta Bilardi

Università La Sapienza di Roma, Italy

Global lines and geopolitics of early modern age: Maps for a global world

Alessandro Ricci

Università di Bergamo, Italy

Session 154 Wed Sept 10
Room ALB 2:00pm - 3:30pm

Going beyond the city borders – Culture's role in regional development, with a special focus on European capital of culture

Session-Chairs:

Judit Sulyok, Katalin Lorincz, Eszter Madarász

Culture now drives economic growth and social cohesion. Once deemed elitist, it is increasingly opened to all social groups. Vibrant cultural scenes boost city branding, attract talents, and improve locals' quality of life. EU policy echoes this: the European Capital of Culture title defines culture broadly and helps even smaller cities and regions develop strategies that overcome geo-

graphic barriers and promote inclusion. The main goal of the session is to share research results unveiling the role of culture-oriented developments in regional development. The session includes conceptual, theoretical, and methodological papers, case studies and best practice reports.

Presentations:

From miners to students to knowledge-intensive entrepreneurs? On the (sociocultural) complexities of establishing entrepreneurship in post-industrial regional development

Lukas Robert Zaghow

Technical University of Berlin, Germany

Celebrating culture without borders: The twin town Gorizia-Nova Gorica as European Capital of Culture 2025

Julia Dittel, Florian Weber

Saarland University, Germany

Culture for all? Access to culture from the perspective of the European Capital of Culture (ECoC) programme

Katalin Lorincz, Eszter Madarasz, Judit Sulyok

Room THE

2:00pm - 3:30pm

Islands and Their Geographies in a Transforming Europe

Session-Chairs:

Anica Čuka, Mucahid Mustafa Bayrak, Macia Blazquez-Salom, Sun-Kee Hong, Patsy Lewis

Globalization accelerates change worldwide, affecting regions unevenly. Islands face heightened challenges from extreme events and limited resources. Their geographic isolation increases vulnerability, making local communities essential to fostering sustainability. Progress relies on strong collaboration among local, regional, and national authorities. This session examines island geographies amid profound economic, demographic, and cultural shifts in Europe, where peripheral islands are especially impacted. The contributions critically assess island development challenges and propose sustainable, community-centered solutions to enhance resilience and equity in these unique and increasingly pressured environments. Understanding these dynamics is key to informing more inclusive and forward-looking policy approaches.

Presentations:

Reactivation of the profit rate via upgrading mass tourism destinations

Macia Blazquez-Salom, Marc Fuster-Uguet, Nora Müllere

Universitat de les Illes Balears, Spain

Addressing island depopulation: The complex links between tourism and new residents

Carolyn Funck

Wed Sept 10

Room SIS

4:00pm - 5:30pm

**The changing and contrasting
geographies of railways in
Europe**

Session-Chairs:

Simon Blainey, Amparo Moyano

Railways in Europe are undergoing an ongoing evolution from national systems comprised primarily of conventional mixed use (passenger and freight) routes to more heterogenous systems with an increasingly fragmented and differentiated nature. At the same time, they are exhibiting a series of paradoxes which operate unevenly over space. This session will explore the geographical impacts of the changes being experienced by European railway systems in a range of spatial and temporal contexts. It will also consider the interactions between railway systems and broader societal phenomena such as post-Covid changes in travel patterns.

Presentations:

**Geographical analysis of the
evolution of overnight train
services in central and western
Europe since 1989**

Simon Blainey¹, Marcin Król², Jakub
Taczanowski³

¹*University of Birmingham, United Kingdom;*

²*SGH Warsaw School of Economics, Poland;*

³*Jagiellonian University, Krakow, Poland*

**Night trains in Europe – sustainable
alternative or niche market?**

Session 123/II Wed Sept 10
Room JOS 4:00pm - 5:30pm

The healing city in times of climate change

Session-Chairs:

Susann Schäfer, Soeren Becker, Emanuele Garda

This session explores conceptual approaches to urban health and the idea of healing cities within the context of climate change. It examines the role of green areas in urban environments, particularly their capacity to support and enhance both physical and mental health. Case studies will shed light on how the presence or absence of green spaces influences the prevalence of specific diseases and medical conditions. The session also considers urban policies and projects aimed at strengthening green infrastructures to improve public health. Finally, it invites reflections on or examples of climate change adaptation strategies that link urban nature to human health benefits.

Presentations:

Green spaces are good for health, but who looks after the health of green spaces?

Julian Dobson¹, Nicola Dempsey²

¹*Sheffield Hallam University, United Kingdom;*

²*University of Sheffield, United Kingdom*

Session 135/II Wed Sept 10
Room AZS 4:00pm - 5:30pm

Arts-based research in urban geography: Re-imagining urban lifeworlds

Session-Chairs:

Miriam Haselbacher, Philipp Schnell, Wiebke Sievers

Urban spaces are living texts that are shaped by multiple interactions and histories that have unfolded over time. They are marked by unequal power relations that manifest in diverse ways, leading to varying perceptions and experiences among individuals and groups. While qualitative and quantitative research methods have traditionally been used to generate knowledge about urban spaces, arts-based research methods hold

the promise to create new perspectives for research and to highlight aspects of lived urbanity that have been unnoticed or under-researched. Hence, they can provide the means and media to re-imagine urban lifeworlds and the ways we approach urban environments.

Presentations:

Bottom-up literary production on the margins of the city. Confluences of political and literary participatory practices in Barcelona

Núria Codina

KU Leuven, Belgium

Urban green between top-down affective atmospheres and intimacy: An artistic-geographic research project to foster subjective relations with Le Cascine park in Florence

Matteo Puttilli, Cecilia Pasini, Panos Bourlessas

University of Florence, Italy

Layering perspectives: Printmaking as a method to explore urban lifeworlds

Helena Segarra, Julien Segarra, Miriam Haselbacher

Austrian Academy of Science

The session explores urban-to-rural migration across Europe, driven by the polycrisis and the quest for sustainable lifestyles. In recent decades, the movement of people, culture, and practices from cities to rural areas has become a significant social phenomenon. Urban migrants bring new knowledge and capital to the countryside, thus have the potential to enhance the sustainability of rural communities, but their arrival can create tensions too. What is the impact of the flow of urban social groups, values, attitudes, and practices in rural areas? How can they contribute to the sustainability of rural communities?

Presentations:

The social economy of knowledge and rural transformation: Insights from the cold mountain shelter

Gusztáv Nemes

HUN-REN KRTK, Hungary

'Demographic Winter' in Italian inner areas: Central Apennines as a case study

Room SR1

4:00pm - 5:30pm

Socio-spatial cleavages and urban rehabilitation policies in European cities

Session-Chairs:

Andrea Visioli, Mar Esteve-Güell, Oriol Nel·lo i Colom

Social inequalities and residential segregation are growing challenges in European cities, driven by diverse structural and contextual dynamics – including the configuration of urban systems and welfare regimes. Such factors lead, across Europe, to heterogeneous patterns of socio-spatial concentration, commonly involving clusters of low-income groups, poor housing conditions, and limited access to public services. This session aims to foster a comprehensive understanding of a) the evolving relationship between inequalities and segregation, b) the factors driving them, and c) their social impacts. It also seeks to highlight innovative research approaches and urban policy tools aimed at promoting more equitable and integrated urban environments.

Presentations:

Changing socio-spatial differences in Budapest before and after the 2008 financial crisis

Future proofing geography education: towards ethical and inclusive fieldwork

Session-Chairs:

Bouke van Gorp, Dan Swanton, Sara Brouwer, Veronique Schutjens, Charlotte Miller

An important part of educating new generations of geographers takes place outside the lecture halls through fieldwork. Walking tours, bus excursions, and field observations offer students opportunities for experiential learning, to combine theory and practice, and to observe real world places alongside textbook examples. But, to what extent are fieldwork teaching practices and

traditions in human geography in line with current ambitions to make higher education institutions more ethical and inclusive? This session offers a space to exchange ideas and inspiration to future proof fieldwork. Presenters from various institutes discuss recent efforts, share newly developed materials, and insights.

Presentations:

A manifesto for fieldwork: Co-creating visions for the future for fieldwork

Social movements in times of commodification of housing and the anthropocene

Session-Chairs:

Cornelia Dlabaja, Antje Daniel

This session explores urban protests, social movements, and inequality through the lens of urban and movement research. It focuses on forms of protest, organizational modes, and how social inequalities, such as access to housing, labor, participation, and urban space, manifest in cities. It also examines the roles of planners, urban policy actors, and activists in shaping urban decision-making. The panel invites contributions that address current protest movements, particularly in relation to climate change, housing commodification, gentrification, and limited democratic participation. Theoretical and empirical studies on protest forms, inequality mechanisms, and actor relations in urban contexts are equally encouraged.

Presentations:

Urban activism to improve the environmental quality of Polish cities in the times of the anthropocene

Renewable energy on the move: Spatial patterns and institutional barriers to a low-carbon future

Session-Chairs:

Federico Martellozzo, Marco Grasso, Stefano Clò, Filippo Randelli, Matteo Dalle Vaglie

This session explores the uneven spatial diffusion of renewable energy – solar, wind, hydro, and biomass – across and within countries. It examines how institutional, socio-technical, and economic factors shape regional adoption patterns. We welcome theoretical and empirical contributions, using qualitative or quantitative approaches, especially those involving GIS, spatial modeling, or case studies. Topics include policy frameworks, governance, public acceptance, market dynamics, and energy infrastructure. By fostering interdisciplinary dialogue, the session aims to deepen our understanding of the geographical and institutional barriers to a just and effective renewable energy transition.

Presentations:

Discursive context and conflicts of energy transition and built heritage protection in a metropolitan locality

Exploring the links between rural smartification and digitalization: Regional inequalities and socio-spatial exclusion

Session-Chairs:

Bianka Plüschke-Altof, Ingmar Pastak, Bradley Loewen, Kadri Leetmaa

Smartification and digitalization mark an ongoing societal change with important geographical implications. The session critically engages with these processes in rural contexts. Moving beyond dominant readings of smartification as technology-, market- and urban-based, we turn to interpretations of ‘smart’ in rural realities, paying attention to inequalities and exclusion. Despite recently receiving more attention, smart rurality has hitherto been under-recognized or subjected to urban blueprints not necessarily fitting rural realities. We focus on socio-spatial divides smartification is embedded in and question to what extent strategies such as “smart specialization”, “smart social innovations”, or “smart villages” can overcome or are further perpetuating these.

Presentations:

Thursday

Session 104/I Thu Sept 11
Room JOS 9:00am - 10:30am

Global energy – energy crisis, energy transition, energy geography

Session-Chair:

Balázs Kulcsár

Energy strategies do not take into account the utilization of urban areas for wind energy. In order to achieve maximum efficiency, the size of wind farms is constantly increasing, thus carving out an ever-larger slice of the natural and agricultural environment. At the same time, the urban environment, which is already intensively used in the spirit of multifunctionality, has significant renewable energy potential, which is currently untapped. The research takes stock of the perceived or real reasons for the current situation, shows what potential lies in the urban utilization of wind energy and to what extent it can participate in providing local electricity needs.

Presentations:

Session 126/ Thu Sept 11
Room ARS 9:00am - 10:30am

Leaving or staying? (Im)Mobilities in a changing Europe

Session-Chairs:

Barbara Staniscia, Josefina Domínguez-Mujica

This session investigates post-pandemic transformations in human (im)mobility, with particular attention to renewed patterns of movement and emergent phenomena such as rural revitalization, remote work, and digital nomadism. It conceptualizes (im)mobility as both a matter of agency and a condition of constraint, shaped by individual characteristics (e.g., personality, life stage, gender) as well as structural determinants (e.g., regional disparities, access to local resources). Convened by the Globility Commission, the session highlights the dynamic interplay between subjective experiences and territorial contexts in configuring patterns of (im)mobility across Europe. Theoretical and empirical contributions critically examine how place-identity and place-attachment in-

form (im)mobility choices and influence broader socio-spatial impacts on both origin and destination areas.

Presentations:

Constellations of mobility in the present Euro-Mediterranean space: Apennine mountains and the leaving or staying scenarios

Monica Meini, Diana Ciliberti,
Giovanna Sebastianelli

University of Molise, Italy

Session 134/ Thu Sept 11
Room SIS 9:00am - 10:30am

Promoting (in)equality. Places, people and power within participative processes

Session-Chairs:

Emanuela Gamberoni, Silvy Boccaletti, Valentina Capocefalo, Giovanna Di Matteo, Daniele Pasqualetti, Giuseppe Gambazza

In a context of crisis, the erosion of welfare and care policies is intensifying marginalisation - understood as both spatial segregation and exclusion from decision-making - of certain social groups. While discourses on alternative practices of care and social inclusion often focus on these groups, in practice they often fall short due to inadequate engagement or to forms of co-optation. This session aims to understand what times, spaces and methods for participation currently exist, to what extent they are effective and what factors can influence participatory processes. The contributions show case studies, theoretical and/or methodological aspects related to this topic, with a particular focus on critical aspects and contradictions.

Integrative geographical research in and about Europe: Concepts and applications**Session-Chairs:**

Ronald Pöppel, Ulrich Ermann

Integrative geography is often seen as the branch of geography where human and physical geography overlap to explore society-nature and human-environment-relations. In contrast to the popular emphasis on the integrative character of geography, the integration of the different perspectives seems to be rare in actual geographical research. This session aims to provide a platform to present and discuss integrative geographical research with a particular focus on challenges of a changing Europe. Topics include problems of sustainability, human and environmental health, natural hazards and associated risks, effects of environmental changes on human activities and social structures.

Urban tourism: dynamics, transformations, and challenges of a changing Europe

Session-Chairs:

Simone Bozzato, Maria Grazia Cinti, Pierluigi Magistri, Marco Maggioli

Urban tourism assumes a pivotal role in shaping the economic, social, and spatial dynamics of European cities. This session addresses the transformations driven by tourism amid broader urban changes, including globalization, technological innovation, and policy interventions. Key issues include the sustainability and resilience of urban destinations, the impact of short-term rentals, and the influence of mega-events on everyday urban life. A transdisciplinary perspective is adopted to capture the complexity of these dynamics. Contributions explore emerging practices, governance strategies, gentrification, and evolving models of tourism, fostering an inclusive and critical dialogue on the future of urban tourism in a changing Europe.

Room JEK 9:00am - 10:30am

Looking at the overlooked urbanities: People, practices and left-behind cities

Session-Chairs:

Julia Wesely, Yimin Zhao

Academics and policymakers frequently use the concept of left-behind places to diagnose and address growing socio-spatial inequalities amidst the poly-crisis of climate change, the pandemic, and conflicts. The concept was appropriated in urban research, for example, to examine transformations of (former) industrial cities, and the urban impacts of resource re-distribution instruments. The session delves into the implications of being (in) an intellectually and/or politically left-behind urban area to uncover experiences of neglect. It uses the term overlooked urbanities to discuss why and how different people, places, and practices remain marginalised and under-theorised in urban research and policy.

Back to the future: The 15-min city and active mobility indicators

Session-Chairs:

Kirsten von Elverfeldt, Maria Anna Martin, Sebastian Block

Around 70% of global greenhouse gas emissions originate in cities, much of it from transportation. Our session thus focuses on indicators for sustainable urban mobility, especially in the context of the 15-minute city. While this concept is gaining traction, most analyses ignore how urban design can combine safe, healthy and sustainable travel. We will bring together researchers to discuss methods and challenges in measuring walkability, bikeability, and user perceptions, including routing for heat-avoiding, quiet, and greener travel. The session will include presentations and a panel discussion to exchange insights and promote collaboration toward car-independent, active mobility futures in cities.

Session 126/II Thu Sept 11
Room ARS 11:00am - 12:30pm

Leaving or staying? (Im)mobilities in a changing Europe

Session-Chairs:

Barbara Staniscia, Josefina Domínguez-Mujica

This session investigates post-pandemic transformations in human (im)mobility, with particular attention to renewed patterns of movement and emergent phenomena such as rural revitalization, remote work, and digital nomadism. It conceptualizes (im)mobility as both a matter of agency and a condition of constraint, shaped by individual characteristics (e.g., personality, life stage, gender) as well as structural determinants (e.g., regional disparities, access to local

resources). Convened by the Globility Commission, the session highlights the dynamic interplay between subjective experiences and territorial contexts in configuring patterns of (im)mobility across Europe. Theoretical and empirical contributions critically examine how place-identity and place-attachment inform (im)mobility choices and influence broader socio-spatial impacts on both origin and destination areas.

Presentations:

The Narratives of immobility: Understanding the complexities of staying in rural Hungary's peripheral areas

Flóra Zsinka, Viktor Berger

University of Pécs, Hungary

The attractiveness of small island spaces during and after the pandemic: The case of El Hierro (Canary Islands, Spain)

Josefina Domínguez-Mujica, Víctor Jiménez Barrado, Mercedes Rodríguez-Rodríguez

University of Las Palmas de Gran Canaria, Spain

From city streets to country roads: The integration of rural newcomers in Latvia

Ženija Krūzmētra, Līga Feldmane

Latvia University of Life Sciences and Technologies, Latvia

Between staying and returning: The (im)mobility challenges faced by young Brazilian migrants in Portugal

Adelia Verônica Silva, Maria Lucinda Fonseca

Session 134/II

Thu Sept 11

Room SIS

11:00am - 12:30pm

Promoting (in)equality. Places, people and power within participative processes

Session-Chairs:

Emanuela Gamberoni, Silvy Boccaletti, Valentina Capocefalo, Giovanna Di Matteo, Daniele Pasqualetti, Giuseppe Gambazza

In a context of crisis, the erosion of welfare and care policies is intensifying marginalisation - understood as both spatial segregation and exclusion from decision-making - of certain social groups. While discourses on alternative practices of care and social inclusion often focus on these groups, in practice they often fall short due to inadequate engagement or to forms of co-optation. This session aims to understand what times, spaces and methods for participation currently exist, to what extent they are effective and what factors can influence participatory processes. The contributions show case studies, theoretical and/or methodological aspects related to this topic, with a particular focus on critical aspects and contradictions.

Presentations:

Systemic impacts of low-carbon transition policies: Co-designing potential leverage points to mitigate housing and energy vulnerability in Innsbruck

Michael Klingler, Fiona De Fontana

BOKU University, Austria

Citizen engagement and just adaptation to flooding in Amsterdam

Michele Castrezzati

University of Vienna, Austria; University of Amsterdam, Netherlands

How to make yourself heard: Urban activists' role-choices

Session 138/II Thu Sept 11
Room THE 11:00am - 12:30pm

Integrative geographical research in and about Europe: Concepts and applications

Session-Chairs:

Ronald Pöppel, Ulrich Ermann

Integrative geography is often seen as the branch of geography where human and physical geography overlap to explore society-nature and human-environment-relations. In contrast to the popular emphasis on the integrative character of geography, the integration of the different perspectives seems to be rare in actual geographical research. This session aims to provide a platform to present and discuss integrative geographical research with a particular focus on challenges of a changing Europe. Topics include problems of sustainability, human and

environmental health, natural hazards and associated risks, effects of environmental changes on human activities and social structures.

Presentations:

Borders, environmental challenges and governance issues in territorially complex river basins. The case of the Noguera Ribagorzana river (Spain)

Joan Tort Donada¹, Alexis Sancho Reinoso², Teresa Navas Ferrer³

¹*Dept. of Geography, Universitat de Barcelona;*
²*Dept. of Environmental and Energy Affairs, Office of the Lower Austrian Government;* ³*Dept. of Theory and History of Architecture and Communication Techniques, Universitat Politècnica de Catalunya · BarcelonaTech; Spain*

Nature is dead! Who killed it? Transitions to a future 'without nature'

Session-Chairs:

Eleonora Guadagno, Sara Bonati,
Ginevra Pierucci, Marco Tononi

Climate change challenges the concept of "nature" and its relationships with society, highlighting the loss of what we define as nature due to human activities. As a result, the boundary between nature and society is increasingly blurred, with societies developing a deeper connection to nature while also seeking innovative ways to reshape it. Drawing on the "social nature" debate, this session presents perspectives from other than human geographies, biopolitics, and political ecology. Key questions include: How are we coping with the mourning of nature? What does it mean to inhabit a planet "without nature"? Can the practice of "reproducing nature" support ecological transition?

Presentations:

What "nature" in climate policy? From the loss of nature to nature as a resource

Sara Bonati¹, Claudia Morsut²

¹*Università degli studi di Genova, Italy;* ²*University of Stavanger, Norway*

Vegetal geography and public policy: Advancing the implementation of nature-based solutions in urban areas

Urban tourism: Dynamics, transformations, and chal- lenges of a changing Europe

Session-Chairs:

Simone Bozzato, Maria Grazia Cinti,
Pierluigi Magistri, Marco Maggioli

Urban tourism assumes a pivotal role in shaping the economic, social, and spatial dynamics of European cities. This session addresses the transformations driven by tourism amid broader urban changes, including globalization, technological innovation, and policy interventions. Key issues include the sustainability and resilience of urban destinations, the impact of short-term rentals, and the influence of mega-events on everyday urban life. A transdisciplinary perspective is adopted to capture the complexity of these dynamics. Contributions explore emerging practices, governance strategies, gentrification, and evolving models of tourism, fostering an inclusive and critical dialogue on the future of urban tourism in a changing Europe.

Presentations:**The role of sports events in developing medium-sized cities: The challenges of Novara as a tourism destination**

Raffaella Afferni, Carla Ferrario
Università del Piemonte Orientale, Italy

Session 164

Thu Sept 11

Room ALB

11:00am - 12:30pm

Sounds, touches, feelings of war zones: Embodied and emotional geographies of resistance*Session-Chair:*

Priscyll Anctil Avoine

This session desires first, to create a collective space for critical reflection on the violent spatialities unfolding through the current multiple and overlapping wars and genocides. Second, it wishes to contest the sensorial, emotional, visual field of violence by bringing feminist and decolonial translocal solidarities to the forefront. While war zones and genocidal violence multiplied worldwide, the panel brings attention to sounds, touches, and feeling of war zones at multiples scales – bodies, intimate, geopolitical, local and global – which convey critical reflections on gendered wars such as feminicides, climate wars, racialization of space, and genocidal violence.

Presentations:**Embodied experiences of resistance: Maternal spaces of solidarity in Cape Town's gang-present communities**

Line Relisieux

London School of Economics, United Kingdom

Women and the colonality of urban atmospheres of terror in Rio de Janeiro's Favelas

Anne-Marie Veillette

Collaborating on changing cities: Citizen science as an urban planning ally

Session-Chairs:

Venere Stefania Sanna, Cristina Capineri, Michela Teobaldi, Giacomo-Maria Salerno, Francesco Di Grazia, Gözde Yıldız

Our changing cities are experimenting with new policies, methodologies, and tools that engage citizens with innovative approaches to urban challenges. Citizen Science (CS) and direct citizen involvement are powerful tools for filling information gaps, increasing social and environmental awareness, strengthening public trust in science, and improving community influence on planning activities and policies. This session explores and critically examines the role and potential of CS uses in urban environments by addressing aspects such as community engagement; data collection and analysis; evidence-based policy development; crowdsourced monitoring; co-design, co-creation, collaboration and partnerships; local knowledge; public awareness and advocacy; and inclusivity and diversity.

Presentations:

On smart engagement: Questions about techno-social praxis on inclusive place-based smart city planning process for climate resilient city

Jin-Kyu Jung

University of Washington, United States of America

Bi-directional connection between citizens and public authorities through citizen science

Room SR1

4:00pm - 5:30pm

Water energy food ecosystem nexus in Alpine regions*Session-Chairs:*

Arthur Schindelegger, Hubert Job

Climate change is already impacting Alpine regions, where environmental changes occur rapidly and severely. Altered water regimes – marked by more frequent heavy rainfall, droughts, and reduced snow cover – affect both core Alpine areas and surrounding lowlands. Simultaneously, land use pressures are growing, driven by climate mitigation efforts such as hydropower, wind, and solar energy projects. These dynamics are transforming Alpine landscapes and put pressure on open spaces. This session explores these transformations with a focus on the European Alps and forelands, using the Water-Energy-Food-Ecosystem Nexus to examine interdependencies, particularly the central role of water in driving change.

Presentations:**Institutionalization and strategic implementation of international strategies for sustainable development in the Alpine region**

Sarah Striethorst, Hubert Job

*Julius-Maximilians-Universität Würzburg, Germany***Rethinking spatial planning instruments to protect alpine groundwater resources in Bavaria and South Tyrol**

Kerstin Ströbel

*University of Würzburg, Germany***Climate resilience from the bottom: A multi-criteria decision making approach to collaboratively implement nature-based solutions on private land**

Thu Sept 11

Room SR2

4:00pm - 5:30pm

The future of retail - digitalization and revitalization*Session-Chair:*

Ulrich Jürgens

Physical environments are emerging that blend the physical space of a traditional store with digital applications. These developments manifest themselves in the form of unmanned stores and vending machines that use the full range of technological advances to offer customers a personalized shopping experience. The Theory of Planned Behavior or the Technology Acceptance Model can help to investigate which customer clientele feels addressed by the concept of unmanned stores and in which spatial structures and competitive networks the customers operate.

Presentations:**Innovation and survival strategies of rural grocery stores: Experiences from sparsely populated areas in Sweden**

Doris Anna Carson, Dean Bradley Carson

Umea University, Sweden

Navigating space and strategy: The role of physical stores in Omnichannel Retail

Session 146

Thu Sept 11

Room JOS

4:00pm - 5:30pm

Feminist perspectives on care, paid employment, and the city

Session-Chairs:

Henriette Bertram, Sarah Mente, Johanna Niesen

Feminist critique of capitalist patriarchy has long included a critique of space and planning practices that prioritise the needs of paid employment over those of caregiving, despite their interdependence. It was argued that the built environment, along with gendered norms and stereotypes, discouraged careers – mostly women – from taking up employment. Municipalities in Europe have initiated "gender-sensitive" and "family-friendly" planning projects, but few discuss the interdependency of productive and reproductive tasks or relate planning to systemic problems. The goal is to reimagine urban, suburban, and rural environments to support healthy caregiving and work relationships.

Presentations:

Affective vélo-mobilities of care in postsocialist settings

Maria Lindmäe

Tallinn University, Estonia

Towards a gender-sensitive planning model for rural areas: Care as a transversal catalyst for equal rural development

Alessia Bertuca, Claudia De Luca

Climate change and agri-food practices: Reconfigurations, new narratives and socio-ecological futures

Session-Chairs:

Fausto Di Quarto, Daniel Delatin Rodrigues

Climate change influences profoundly and unevenly agri-food systems, which in turn contribute to ecological instability. Different responses emerge in this context: from agro-industrial intensification to innovative adaptations, such as the introduction of exotic species. These responses, however, give rise to significant questions in relation to the actors

and power relations, as well as to perceptions and narratives involved. This session explores the emergence of new agrifood landscapes in Southern Europe as laboratories of adaptive agricultural practices, such as socio-ecological transitions and territorial transformations and related politico-ecological implications; food narratives and new emerging “food fashions” or cultural identities.

Presentations:

Between food democracy and food sovereignty: Which narratives on climate change and agri-food practices?

Chiara Spadaro

Sensing and learning the anthropocene: Future directions in geographical thought

Session-Chairs:

Giovanni Modaffari, Alberto Amore

This session explores how geographical thought evolves in the Anthropocene, marked by climate crisis and biodiversity loss. It examines human-environment relationships beyond human-centric views, embracing multispecies understanding. Key geographical concepts like place, sustainability, and vulnerability are being redefined. Topics include biodiversity governance, Indigenous and hidden biodiversities, artistic and citizen science approaches, critical views on sustainable development, and the role of archives and mapping. The aim is to foster ecologically grounded, just, and inclusive approaches for sustainable futures in line with the UN Decade of Action.

Presentations:

Geography of plastic fragmentation

City Walks overview:

We are organizing city walks that provide insights into the structures and recent dynamics of Vienna. Please note that a public transportation ticket is required for most City Walks.

City Walk 1

Wien7_ Neubau: urban planning, urban development and urban laboratory

Tuesday, Sept 09

2:00 pm - 5:00 pm

Guide: Martin **HEINTEL**

Meeting point: ÖAW Main Building (main entrance)

Route: Zollergasse, Bandgasse, Zieglergasse, Bernardgasse.

Description: Wien7_ Neubau is considered “the” urban laboratory in Vienna. The excursion is dedicated to climate adaptation measures, participation and governance, as well as the transformation of public space. The excursion is at the interface of planning, politics and society and visits places of transformation in public space.

City Walk 2

Segments of the Vienna housing market

Thursday, Sept 11

2:00 pm - 5:00 pm

Guide: Walter **MATZNETTER**

Meeting point: ÖAW Main Building (main entrance)

Route: A 9 min metro ride will bring us to Heiligenstadt, where we will visit Karl-Marx-Hof, a non-profit project, a historic tenement with rent regulation, and an unregulated private market project. Further uphill, on Hohe Warte, variants of owner-occupied projects will be visited, terminating at Josef Hoffmann’s artists’ villa colony of the early 1900s.

Description: Vienna is a city of renters. Owner-occupiers are at 20%, and stable. The large rental market, however, includes a large variety of submarkets, from 22% public housing plus 21% limited-profit housing to ca. 20% regulated private rentals and ca. 12% market rentals. In many parts of the city, these submarkets exist side by side. Such proximity allows for a city walk looking into each of these segments.

City Walk 3

Who has a say? Participation in public spaces in Vienna

Wednesday, Sept 10

2:00pm - 4:00pm

Guide: Yvonne **FRANZ**

Meeting point: ÖAW Main Building
(main entrance)

Route: Esterházy-Park, Mariahilfer Straße, Gumpendorfer Straße, U6-station Gumpendorfer Straße, IKEA at Westbahnhof.

Description: The City of Vienna is proud on its recent achievements in the redevelopment of public spaces. Cool streets, climate-fitness, superblocks, sponge-city approaches and many other buzzwords demonstrate a change in planning within the framework of socio-ecological transformation. Participation processes are a key element in implementation. However, not everyone who uses public spaces is consulted or even heard. This city walk focuses on invisible groups who, for various reasons, depend on public space in the city. Join this tour if you are interested in critical reflections on the nexus of public space and participation.

City Walk 4

Climate aspects of a dense city center

Wednesday, Sept 10

2:00pm - 5:00pm

Guide: Erich **MURSCH-RADLGRUBER**

Meeting point: ÖAW Main Building
(main entrance)

Route: Georg-Coch-Platz, Heiligenkreuzerhof, Hoher Markt, Stephansplatz, Neuer Markt, Stadtpark, Landstrasse Wien Mitte, Stubentor.

Description: Walk through the city center of Vienna with discussion of aspects of climate change as a consequence of city structure (buildings, streets and green structure)

City Walk 5

**15 million years in 300 meters
(downhill)**

Thursday, Sept 11

2:00pm - 5:00pm

Guide: Robert **PETICZKA**

Meeting point: ÖAW Main Building
(main entrance)

Route: Leopoldsberg, Kahlenberg
Nußdorf, Danube, Hohe Warte (Stadion)

Description: The aim of this excursion is an overview of the geological and geomorphological development of the region, the anthropogenic changes to the course of the Danube and the Danube tributaries as well as the climate, site qualities, potential vegetation and land use on Viennese soil. Subsequently, some “physiogeographical” facets of Vienna's urban landscape will then be explored on foot.

City Walk 6

**Data walk: Social dimensions of
urban heat**

Tuesday, Sept 09,

Wednesday, Sept 10,

Thursday, Sept 11

2:00pm - 5:00pm (all 3 days)

Guide: Anna **HÄMMERLE-SHAHIMY**

Meeting point: ÖAW Main Building
(main entrance)

Route: Stephansplatz, metro ride to
Keplerplatz, Supergrätzl Favoriten,
Hauptbahnhof / main station

Description: Vienna is significantly impacted by urban heat, forcing the city to adopt diverse mitigation strategies. In this Data Walk, mobile sensors and thermal imaging cameras will be utilised to provide an empirical base for discussions on the social dimensions of urban heat. Special attention will be given to vulnerable groups within public spaces, a critical analysis of ongoing urban transformations and their implications for social equity and segregation.

City Walk 7

Urban transformations – from a planning perspective

Tuesday, Sept 09

2:00pm - 5:00pm

Guide: Cornelia **DLABAJA**

Meeting point: ÖAW Main Building
(main entrance)

Route: U6 Station Josefstädter Straße,
Yppenplatz, Brunnenmarkt,
Urban-Loritz-Platz

Description: The walk addresses urban transformations on the examples of urban planning processes in the area of Europe's longest street market Brunnenmarkt and the area of the underground line U6 at the public library located at the Urban-Loritz-Platz.

City Walk 8

Vineyards, terraces, and flood dynamics: A journey through Vienna's geographical layers

Tuesday, Sept 09

2:00pm - 5:00pm

Guide: Philipp **MARR**, Till **WENZEL**

Meeting point: ÖAW Main Building
(main entrance)

Route: Kahlenberg (Metro and Bus);
Several Stops at Kahlenberg and
during the descend to Grinzing;
End: Tram station Grinzing

Description: This 3-hour city walk provides a field-based introduction to the physical geographical landscape of Vienna, beginning at Kahlenberg and descending towards the urban core. The walk explores the geology, soils, land use (we will walk through the wine yards), the sequence of Danube river terraces, as well as the flood dynamics in the city and its adaptation strategies.

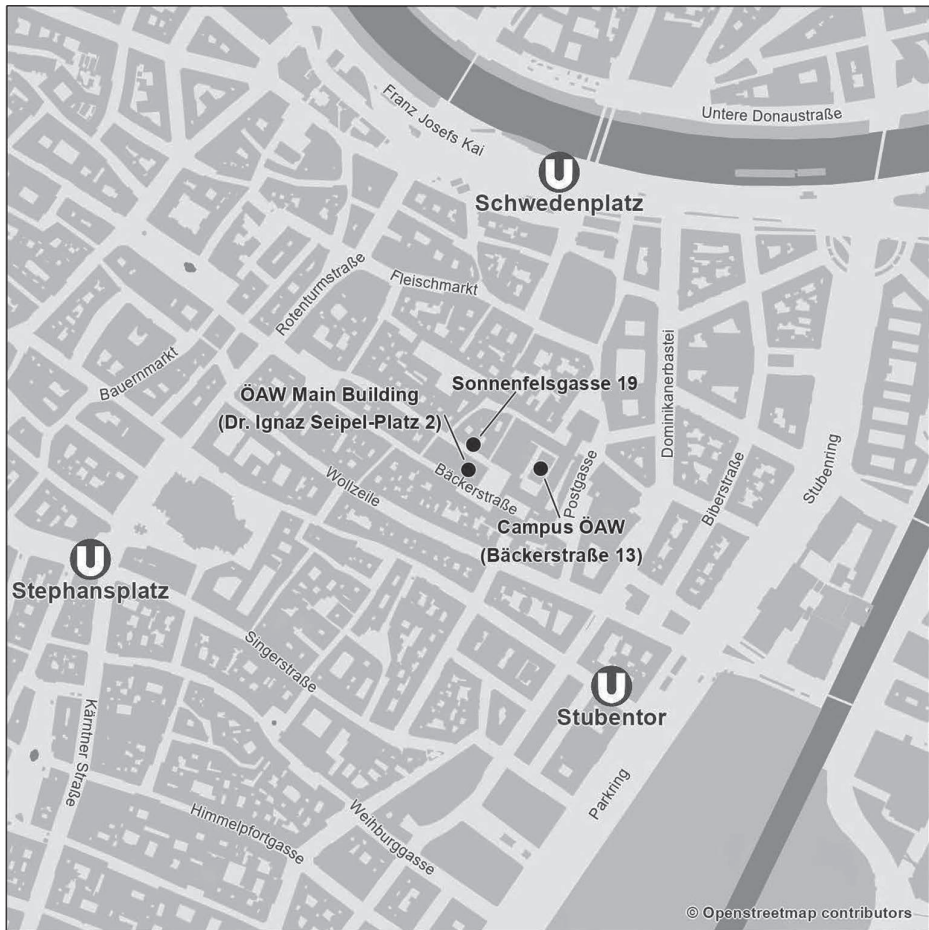

City Walk 9**Gentrification and displacement
in Vienna?****Wednesday, Sept 10**

2:30pm - 5:00pm

Guide: Judith **SCHNELZER****Meeting point:** ÖAW Main Building
(main entrance)**Route:** several stops through the 7th
district, Neubau;
End: Neubaugasse (Metro Stop U3)

Description: Vienna is often seen as an international posterchild for social and affordable housing. On this walk, we explore gentrification and displacement by looking at how Vienna's (historic) housing stock is being transformed and how public spaces are changing in their use. We look at how the welfare-state environment has led to subtle forms of displacement – sometimes framed as urban renewal. At the same time, we look at the ways in which capitalist urban development enables new forms of (housing) exclusion and racialized dispossession.

Venue >

ÖAW Main Building

Ground Floor: Clubraum (CLU), Anton Zeilinger Salon (AZS)

1st Floor: Festsaal (FES), Sitzungssaal (SIS), Johannessaal (JOS)

2nd Floor: Museumszimmer (MUS)

Campus ÖAW

Seminarraum 1 (SR1), Seminarraum 2 (SR2), Arrupe-Saal (ARS)

Jesuitenkeller (JEK)

Sonnenfelsgasse 19

Ground Floor: Alte Burse (ALB)

1st Floor: Theatersaal (THE)

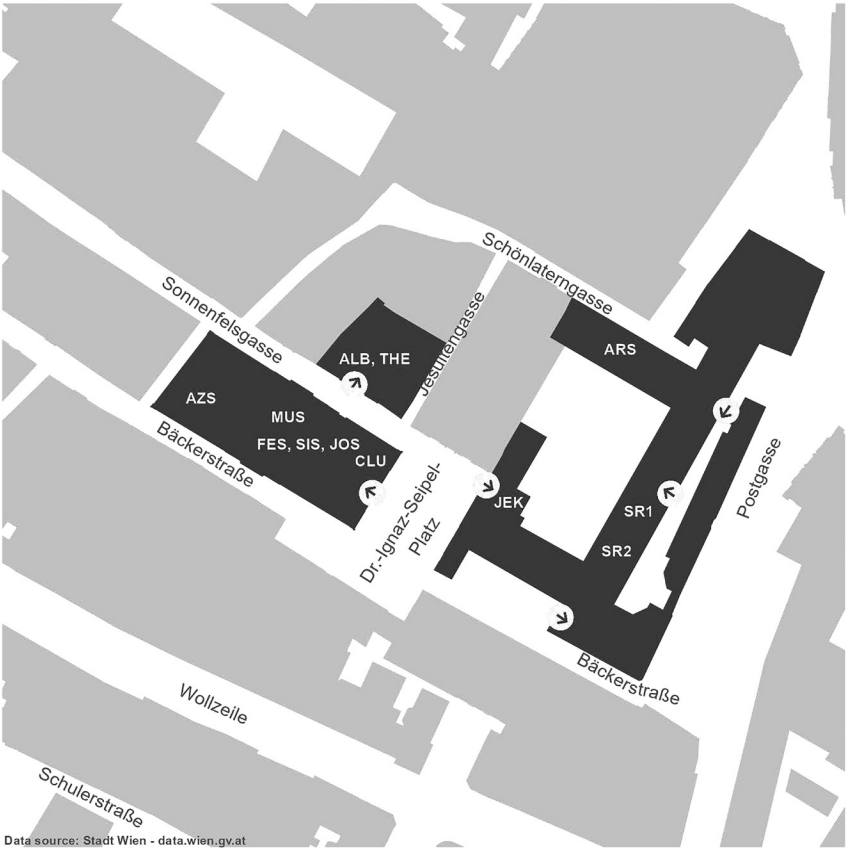

The congress will take place at the Austrian Academy of Sciences right in the historical city centre of Vienna from Monday 8 September to Thursday 11 September 2025.

The campus buildings, designated as historical monuments, are part of the historic Old Vienna University Quarter. Originally constructed in the 17th century alongside the Jesuit Church near Dr. Ignaz Seipel-Platz, the complex was expanded over the centuries to include the Neue Aula, which now serves as the main building of the Austrian Academy of Sciences (ÖAW), as well as a library building. Following extensive renovations, the academy has transformed one of Vienna's most traditional centers of knowledge, bringing it into the 21st century and making it accessible to both the scientific community and the public.

The Academy Campus is situated in the Stubenviertel district, an area closely tied to the academic life of Vienna since the late Middle Ages. Its origins date back to 1385, when Duke Albrecht III established the “Collegium Ducale” across from the Dominican monastery. Architectural archaeology has pinpointed the original buildings for this purpose along today's Postgasse, near the so-called Stöckl building and the towering eastern wing of the later Jesuit College. What began as a few interconnected houses soon expanded into a sprawling, monastery-like complex centered around a Courtyard.

By the early 15th century, the university had added a southern building known as the “Nova Structura” or “Neue Schul,” which served not only the faculty of arts but also lawyers, physicians, and theologians. Student halls of residence, or bursen, including the Silesian Bursa, Sprenger Bursa, and Rosenbursa, quickly sprang up in the surrounding area, solidifying the district's role as a hub of learning.

Venue

Conference dinner

On Wednesday 10 September, 19:00 pm., all registered conference dinner participants may join us for an evening at 10er Marie, one of Vienna's most traditional and iconic Heuriger wine taverns. Dating back to 1740, 10er Marie is considered the oldest continuously operated Heuriger in Vienna. With its rustic charm, cosy inner court-yard, and authentic Viennese atmosphere, it offers the perfect setting to unwind, enjoy local wine and hearty Austrian dishes, and experience a beloved part of Viennese culture.

The Heuriger tradition refers to the serving of the current year's wine (heuriger Wein) in taverns typically run by winemaking families. These establishments are known for their relaxed, convivial ambiance and simple regional cuisine—often accompanied by live traditional music.

10er Marie was first officially mentioned in documents in 1740. Originally run by the Ottakring winemaking family Haimböck, the tavern's name is said to derive from both its historic address (Alt-Ottakring No. 10) and the innkeeper's daughter Maria. Among its most notable guests was Crown Prince Rudolf, who was often driven there by his personal coachman, Bratfisch. Later, the tavern also welcomed figures such as the poet Josef Weinheber and the operetta composer Emmerich Kálmán. From the 1940s until 1986, 10er Marie was shaped by its legendary innkeeper Käthe Musil, who transformed it into a meeting place for prominent guests from politics and society.

How to get there:

📍 Ottakringer Straße 222-224, 1160 Vienna

🚊 Public transport from the city centre or the conference venues:

Take U3 (orange line) to Ottakring (final stop), then walk approx. 10 minutes or take tram 44, starting at Ring/Schottentor leave at Johannes-Krawarik-Gasse (=one stop before final station).
